

ОПИС НА ДОКУМЕНТИТЕ, СЪДЪРЖАЩИ СЕ В ОФЕРТАТА

за участие в процедура за възлагане на обществена поръчка с предмет:
Модернизация (ретрофит) на възлови разпределителни станции 20 (10) кв и изграждане на
вериги на телемеханика, реф. № PPD 18-103

Наименование на документа	Форма на документа (оригинал или заверено копие)/ Страница № (да се попълни)
1. Опис на документите, съдържащи се в заявлението за участие – оригинал по образец на Възложителя	1 - 6
2. Информация относно личното състояние и критериите за подбор на участника „Старт инженеринг“ АД	
2.1. Единен европейски документ за обществени поръчки (ЕЕДОП)	
2.1.1 Единен европейски документ за обществени поръчки (ЕЕДОП) на „Старт инженеринг“ АД	оригинал на CD – 1 брой, електронно подписан
2.1.2. Единен европейски документ за обществени поръчки (ЕЕДОП) на трето лице за процедурата – проектант по част Конструктивна - инж. Валентин Христов Христов	оригинал на CD – 1 брой, електронно подписан
2.2. Заверено с «вярно с оригинала» копие на Удостоверение за вписване на „Старт-Инженеринг“ АД в ЦПРС към КС в България № I-TV004471, първа група, строежи от първа до пета категория, валидно до 30.09.2019г.	7
2.3. Заверено с «вярно с оригинала» копие на Удостоверение за вписване на „Старт-Инженеринг“ АД в ЦПРС към КС в България № II-TV001121, втора група, строежи от първа до четвърта категория, валидно до 30.09.2019г.	8
2.4. Заверено с «вярно с оригинала» копие на Удостоверение за вписване на „Старт-Инженеринг“ АД в ЦПРС към КС в България № III-TV001131 трета група, строежи от първа до пета категория, валидно до 30.09.2019г	9
2.5. Заверено с «вярно с оригинала» копие на Удостоверение за вписване на „Старт-Инженеринг“ АД в ЦПРС към КС в България № IV-TV002142 четвърта група, строежи от първа до пета категория, валидно до 30.09.2019г.	10
2.6. Нотариално заверено копие на Сертификат БДС EN ISO 9001:2015 - сертификат за внедрена и прилагана система за управление на качеството в съответствие с изискванията на стандарта, с обхват проектиране, производство и монтаж на технологични съоръжения, промишлено оборудване и машини, метални конструкции, ел. таблица, ел. инсталации, електрически уредби, пусково-наладъчни дейности на електрически съоръжения до и над 1000V, контролно-измервателни прибори и автоматаизация, програмиране, внедряване, гаранционно и следгаранционно обслужване на системи за автоматично управление на технологични процеси /СКАДА/, отоплителни, вентилационни и охладителни инсталации, издаден на „Старт	11

инженеринг" АД от ЕМ ЕС-СЕРТ България ООД, дата на издаване 06.08.2017г., валиден до 05.08.2020г.

2.7. Заверено с «вярно с оригинала» копие на Сертификат БДС EN ISO 14001:2015 - сертификат за внедрена и прилагана система за управление на околната среда в съответствие с изискванията на стандарта, с обхват проектиране, производство и монтаж на технологични съоръжения, промишлено оборудване и машини, метални конструкции, ел. таблица, ел. инсталации, електрически уредби, пусково-наладъчни дейности на електрически съоражения до и над 1000V, контролно-измервателни прибори и автоматаизация, програмиране, внедряване, гаранционно и следгаранционно обслужване на системи за автоматично управление на технологични процеси /СКАДА/, отопителни, вентилационни и охладителни инсталации, издаден на „Старт инженеринг" АД от ЕМ ЕС-СЕРТ България ООД, дата на издаване 06.08.2017г., валиден до 05.08.2020г..

12

2.8. Заверено с «вярно с оригинала» копие на Сертификат BS OHSAS 18001:2007 - сертификат за внедрена и прилагана система за управление на здравето и безопасността при работа в съответствие с изискванията на стандарта, с обхват проектиране, производство и монтаж на технологични съоръжения, промишлено оборудване и машини, метални конструкции, ел. таблица, ел. инсталации, електрически уредби, пусково-наладъчни дейности на електрически съоражения до и над 1000V, контролно-измервателни прибори и автоматаизация, програмиране, внедряване, гаранционно и следгаранционно обслужване на системи за автоматично управление на технологични процеси /СКАДА/, отопителни, вентилационни и охладителни инсталации, издаден на „Старт инженеринг" АД от ЕМ ЕС-СЕРТ България ООД, дата на издаване 06.08.2017г., валиден до 08.08.2019г.

13

2.9. Заверено с «вярно с оригинала» копие на Сертификат за акредитация на „Старт инженеринг" АД съгласно БДС EN ISO/IEC 17020:2012, БСА регистрация № 232 ОКС, като Орган за контрол от вид С/издаден на 26.11.2018г., валиден до 26.11.2022г.

14-18

2.10. Заверено с «вярно с оригинала» копие на Удостоверение от НАП, териториална дирекция София-ГДО, изх.№290201800337684/12.11.2018г. за липса на задължения на „Старт инженеринг" АД.

19

2.11. Заверено с «вярно с оригинала» копие на Удостоверение от Столична община, дирекция общински приходи, отдел ОП Сердика (оизх. № 7220009419/25.10.2018г. за липса на задължения на „Старт инженеринг" АД по закона за местни данъци и такси.

20

2.12. Заверено с «вярно с оригинала» копие на Удостоверение по чл. 58, ал.1, т.3 от ЗОП – издадено от Изпълнителна агенция „Главна инспекция по труда“ на „Старт инженеринг" АД – изх.№ 18046790/27.04.2018г.

21

2.13. Заверено с «вярно с оригинала» копие на Удостоверение от Агенция по вписванията, изх.№20180309090850/09.03.2018г. за „Старт инженеринг" АД

22-27

2.14.1 Заверено с «вярно с оригинала» копие на Удостоверение от Агенция по вписванията, изх.№20180309090949/09.03.2018г. за липса на вписани обстоятелства ликвидация за „Старт инженеринг" АД

28

2.14.2 Заверено с «вярно с оригинала» копие на Удостоверение от Агенция по вписванията, изх.№20180309091053/09.03.2018г. за липса на вписани обстоятелства несъстоятелност за „Старт инженеринг" АД

29 - 30

2.15. Заверено с «вярно с оригинала» копие на Застраховка „Професионална отговорност за проектиране за строежи първа категория”, [300000,00][BGN]валута. Застрахователна полizza, издадена от ДЗИ –Общо застраховане ЕАД на „Старт инженеринг“ АД, № 212218213000419/ 30.10.2018г., валидна до 04.11.2019г.	31 - 32
2.16. Заверено с «вярно с оригинала» копие на Застраховка „Професионална отговорност“ за строителство за строежи първа категория”, [600000,00][BGN]валута. Застрахователна полizza, издадена от ДЗИ –Общо застраховане ЕАД на „Старт инженеринг“ АД, № 212218213000421/01.11.2018г., валидна до 04.11.2019г.	33 - 34
2.17. Заверено с «вярно с оригинала» копие на Застраховка „Обща гражданска отговорност на „Старт-Инженеринг“ АД като контролен орган от вида „С““. Застрахователна полizza, издадена от ДЗИ –Общо застраховане ЕАД на „Старт инженеринг“ АД № 212218213000177/30.10.2018г., валидна до 04.11.2019г.	35 - 36
2.18. Списък на договори за строителство, идентично или сходно с предмета на обществената поръчка - оригинал	37 - 45
2.19. Заверено с «вярно с оригинала» копие на Удостоверение за добро изпълнение: № CD-DOC-14432/13.12.2017 г., издадено от „ЧЕЗ РАЗПРЕДЕЛЕНИЕ България“ АД	46 - 47
2.20. Заверено с «вярно с оригинала» копие на Удостоверение за добро изпълнение: № 2679/24.07.2017 г., издадено от „Метрополитен“ ЕАД, гр. София.	48 - 49
2.21. Заверено с «вярно с оригинала» копие на Удостоверение за добро изпълнение: № 2676/24.07.2017 г., издадено от „Метрополитен“ ЕАД, гр. София	50 - 51
2.22. Заверено с «вярно с оригинала» копие на Удостоверение за добро изпълнение: № 2677/24.07.2017 г., издадено от „Метрополитен“ ЕАД, гр. София	52 - 53
2.23. Заверено с «вярно с оригинала» копие на Удостоверение за добро изпълнение: № 2678/24.07.2017 г., издадено от „Метрополитен“ ЕАД, гр. София	54 - 55
2.24. Списък на персонала, служители на „Старт инженеринг“ АД, с определена професионална компетентност за изпълнението на поръчката – оригинал	56 - 58
2.25. Заверено с «вярно с оригинала» копие на Удостоверение за пълна проектантска правоспособност - №010881 на Проектант по част „Електрическа“ – инж. Людмила Симеонова Пеева-Ваклина	59
2.26. Заверено с «вярно с оригинала» копие на Удостоверение за пълна проектантска правоспособност - №01923 на трето лице за процедурата – проектант по част Конструктивна - инж. Валентин Христов Христов	60
2.27. Заверено с «вярно с оригинала» копие на Застрахователна полizza, издадена от „Алианц България“ – Застрахователно акционерно дружество на Валентин Христов Христов - трето лице за процедурата – проектант по част Конструктивна - инж. Валентин Христов Христов - № 13180181760000014/13.03.2018г., валидна до 20.03.2019г.	61
2.28. Декларация за ангажираност на трето лице за процедурата – проектант по част Конструктивна - инж. Валентин Христов Христов – оригинал	62

3. Техническо предложение

3.1. Предложение за изпълнение на поръчката за обособена позиция 1 – оригинал по образец на Възложителя	63-64
3.2 Приложение 1 – Срокове за изпълнение на ретрофита – оригинал по образец на Възложителя	65
3.3 Приложение 2 – Техническо предложение за оборудване – оригинал по образец на Възложителя	66-71
3.3.1 Приложение 1.1 - Техническо описание на прекъсвача, в т.ч. гарантирани параметри и съоръжаване	72-158.
3.3.2 Приложение 1.2. - Протоколи от типови изпитвания на английски или български език, проведени от независима акредитирана изпитвателна лаборатория – заверени копия (и допълнителни изпитвания, ако са проведени), с приложен списък на отделните изпитвания на български език.	159-195
3.3.3 Приложение 1.3 Сертификат/акредитация на независимата изпитвателна лаборатория, провела типовите изпитвания – заверено копие	196-206
3.3.4 Приложение 1.4 Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 1 - оригинал	202
3.3.5 Приложение 2.1 - Последно издание на каталога на производителя	203-289
3.3.6 Приложение 2.2 - Удостоверение за одобряване на типа на токовите измервателни трансформатори, издадено по реда и при условията на Закона за измерванията – заверено копие	290-291
3.3.7 Приложение 2.3 - Протоколи от типови изпитвания на токовите измервателни трансформатори на английски или български език, проведени от независима изпитвателна лаборатория с приложени резултати от изпитванията, представени при доставка – заверено копие	292-321
3.3.8 Приложение 2.4 - Сертификат/акредитация на независимата изпитвателна лаборатория, провела типовите изпитвания – заверено копие	322-367
3.3.9 Приложение 2.5 - Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 2 - оригинал	368
3.3.10 Приложение 3.1 - Последно издание на каталога на производителя	369-455
3.3.11 Приложение 3.2 - Удостоверение за одобряване на типа на НИТ, издадено по реда и при условията на Закона за измерванията – заверено копие	456-458
3.3.12 Приложение 3.3 - Протокол от първоначална метрологична проверка, проведена от оправомощена лаборатория, съгласно действащото в Република България законодателство в областта на измерванията (представя се при доставка за всеки НИТ) – заверено копие	459

3.3.13 Приложение 3.4 - Сертификат/акредитация на независимата изпитателна лаборатория, провела типовите изпитвания – заверено копие	460-505
3.3.14 Приложение 3.5 - Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 3 - оригинал	506
3.3.15 Приложение 4.1 - Техническо описание на прекъсвача, в т.ч. гарантирани параметри и съоръжаване	507-593
3.3.16 Приложение 4.2 - Протоколи от типови изпитвания на английски или български език, проведени от независима акредитирана изпитателна лаборатория– заверени копия (и допълнителни изпитвания, ако са проведени), с приложен списък на отделните изпитвания на български език.	594-624
3.3.17 Приложение 4.3 - Сертификат/акредитация на независимата изпитвателна лаборатория, провела типовите изпитвания – заверено копие	625-630
3.3.18 Приложение 4.4 - Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 4 – оригинал	631
3.3.19 Приложение 5.1 - Последно издание на каталога на производителя	632-719
3.3.20 Приложение 5.2 - Удостоверение за одобряване на типа на токовите измервателни трансформатори, издадено по реда и при условията на Закона за измерванията – заверено копие	720-721
3.3.21 Приложение 5.3 - Протоколи от типови изпитвания на токовите измервателни трансформатори на английски или български език, проведени от независима изпитателна лаборатория с приложени резултати от изпитванията, представени при доставка– заверено копие	722-751
3.3.22 Приложение 5.4 - Сертификат/акредитация на независимата изпитателна лаборатория, провела типовите изпитвания – заверено копие	752-797
3.3.23 Приложение 5.5 - Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 5 – оригинал	798
3.3.24 Приложение 6.1 - Последно издание на каталога на производителя	799-884
3.3.25 Приложение 6.2 - Удостоверение за одобряване на типа на НИТ, издадено по реда и при условията на Закона за измерванията – заверено копие	885-887
3.3.26 Приложение 6.3 - Протокол от първоначална метрологична проверка, проведена от оправомощена лаборатория, съгласно действащото в Република България законодателство в областта на измерванията (представя се при доставка за всеки НИТ) – заверено копие	888-926
3.3.27 Приложение 6.4 - Сертификат/акредитация на независимата изпитателна лаборатория, провела типовите изпитвания – заверено копие	927-972
3.3.28 Приложение 6.5 - Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 6 – оригинал	973
3.3.29 Приложение 7.1 - Техническо описание, включващо гарантирани параметри, съгласно общите изисквания към обекта на поръчката - оригинал с подпись и печат на участника	974-976
3.3.30 Приложение 7.2 - Каталог на предлаганото оборудване по поръчката	977-1006
3.3.31 Приложение 7.3 - Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 7 – оригинал	1007
3.3.32 Приложение 8.1 - Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 8 - оригинал	1008

3.4. Декларация за приемане на условията в проекта на договор – оригинал по образец на Възложителя	1009
3.5. Декларация за срока на валидност на офертата – оригинал по образец на Възложителя	1010
4. ПЛИК „ПРЕДЛАГАНИ ЦЕНОВИ ПАРАМЕТРИ“	
4.1. Ценово предложение – оригинал по образец на Възложителя	1
4.1.1. Приложение № 1 - ОБОСОБЕНА ПОЗИЦИЯ № 1 – Стойностна сметка	2
4.1.1.1. Приложение № 1.1 – Цена за изготвяне на работен проект, съгласно техническото задание на възложителя и наредба № 4 от 21.05.2001 г. за обхвата и съдържанието на инвестиционните проекти, необходими за изпълнение на ретрофита по обособена позиция № 1	3 - 4
4.1.1.2. Приложение № 1.2 - Цена за осъществяване на авторски надзор по време на смр по обособена позиция № 1	5
4.1.1.3. Приложение № 1.3 - Количество-стойностна сметка (КСС) за доставка на материали, апаратура, оборудване и съоръжения за изпълнение на модернизацията (ретрофит) на възлови разпределителни станции СР.Н. по обособена позиция № 1	6-8
4.1.1.4. Приложение № 1.4 - Количество-стойностна сметка (КСС) за изпълнение на необходимите дейности за изпълнение на модернизацията (ретрофит) на възлови разпределителни станции СР.Н. по обособена позиция № 1	9-10
4.1.1.5. Приложение № 1.5 - Цена и доставка на резервни части по обособена позиция № 1	11
4.1.1.6. Приложение № 1.6 - Цена за изготвяне на програма и обучение на специалисти на възложителя по обособена позиция № 1	12
4.1.1.7. Приложение № 1.7 - Цена за изготвяне на екзекутивна документация по обособена позиция № 1	13

Дата 17.12.2018 г.

КАМАРА НА СТРОИТЕЛИТЕ В БЪЛГАРИЯ

ЦЕНТРАЛЕН ПРОФЕСИОНАЛЕН РЕГИСТЪР НА СТРОИТЕЛИЯ

УДОСТОВЕРЕНИЕ

№ 1 - ТУ 004471

Комисията за воденето, поддържането и ползването на Централния професионален регистър на строителя, на основание чл. 19 от Закона за камарата на строителите, издава настоящото удостоверение на:

Строител: СТАРТ ИНЖЕНЕРИНГ АД

Седалище и адрес на управление: 1220 София, ул. "Локомотив" № 3

Представляващ: Стоил Колев Стоилов

ЕИК: 030217255

В уврежение на това, че с решение на комисията и протокол 0069/06.11.2008 строителят е вписан в Централния професионален регистър на строителя за изпитвания на строежи със следни обхват:

На основание чл. 5, ал. 1 от Правилника за реда за вписване и водене на Централния професионален регистър на строители:

- **ПЪРВА ГРУПА** • – строежи от високото строителство, прилежащата му инфраструктура, електронни съобщителни мрежи и съоръжения;

На основание чл. 5, ал. 4 от Правилника за реда за вписване и водене на Централния професионален регистър на строители:

- **СТРОЕЖИ ОТ ПЪРВА ДО ПЕТА КАТЕГОРИЯ** • (с изключение на тези по чл. 5, ал. 6, т. 1.1.6 и т. 1.4.4 и т. 15.6)

Конкретният вид на строежите, за които се издава настоящото удостоверение, се определя в чл. 5, ал. 6 от Правилника за реда за вписване и водене на Централния професионален регистър на строителя и във връзка с чл. 137, ал. 1 от ЗУТ.

КАМАРА НА СТРОИТЕЛИТЕ В БЪЛГАРИЯ

ЦЕНТРАЛЕН ПРОФЕСИОНАЛЕН РЕГИСТЪР НА СТРОИТЕЛЯ

УДОСТОВЕРЕНИЕ

№ III - ТУ 001131

Комисията за воденето, поддържането и ползването на Централния професионален регистър на строителя, на основание чл. 19 от Закона за камарата на строители, издава настоящото удостоверение на:

Строител: СТАРТ ИНЖЕНЕРИНГ АД

Седалище и адрес на управление: 1220 София, ул. "Локомотив" № 3

Представляващ: Стоил Колев Стоилов

ЕИК: 030217255

В уверение на това, че с решение на комисията и протокол 0069/06.11.2008 строителят е вписан в Централния професионален регистър на строителя за изпълнение на строежи със следния обхват:

На основание чл. 5, ал. 1 от Правилника за реда за вписване и водене на Централния професионален регистър на строителя:

• ТРЕТА ГРУПА • – строежи от енергийната инфраструктура;

На основание чл. 5, ал. 4 от Правилника за реда за вписване и водене на Централния професионален регистър на строителя:

• СТРОЕЖИ ОТ ПЪРВА ДО ПЕТА КАТЕГОРИЯ •

Конкретният вид на строежите, за които се издава настоящото удостоверение, се определя в чл. 5, ал. 6 от Правилника за реда за вписване и водене на Централния професионален регистър на строителя и във връзка с чл. 137, ал. 1 от ЗУТ

На основание чл.36а ал.3 от ЗОП

На основание чл.36а ал.3 от ЗОП

КАМАРА НА СТРОИТЕЛИТЕ В БЪЛГАРИЯ
ЦЕНТРАЛЕН ПРОФЕСИОНАЛЕН РЕГИСТЪР НА СТРОИТЕЛИ

Член № III - ТУ 1

Строител: СТАРТ ИНЖЕНЕРИНГ АД

030217255

настоящият тапон се издава на основаване на централен за строител и е неразделим част от член № III - ТУ 00113

VALIDNOST NA TAPONA:

Председател на ком.

Изпълнител на тапона

София - 2019 г.

Настоящото удостоверение е невалидно без приложение тялото с указан срок.

КАМАРА НА СТРОИТЕЛИТЕ В БЪЛГАРИЯ

ЦЕНТРАЛЕН ПРОФЕСИОНАЛЕН РЕГИСТЪР НА СТРОИТЕЛИЯ

VACCTOBEPIEHIKE

№ IV - TV 002142

Комисията за воденето, поддържането и ползването на Централния професионален регистър на строителя, на основание чл. 19 от Закона за камарата на строителите, издава настоящото удостоверение на:

Строител: СТАРТ ИНЖЕНЕРИНГ АД
Седалище и адрес на управление: 1220 София, ул. "Локомотив" № 3
Представляващ: Стоил Колев Стоилов
ЕИК: 030217255

В уверение, на това, че с решение на комисията и протокол 0069/06.11.2008 строителят е вписан в Централния професионален регистър на строител за изпълнение на строежи със следния обхват:

На основание чл. 5, ал. 1 от Правилника за реда за вписване и водене на Централния професионален регистър на строителя: **ЧЕТВЪРТА ГРУПА** – строежи от благоустроите на инфраструктурата, хидротехническото строителство и опазването на околната среда.

На основание чл. 5, ал. 4 от Правилника за реада за вписване и водене на Централния професионален регистър на строителя:

• СТРОЕЖКИ ОТ ПЪРВА ДО ПЕТА КАТЕГОРИЯ •

Конкретният вид на строежите, за който се издава настоящото удостоверение, се определя в чл. 5, ал. 6 от Правилника за реда за вписване и водене на Централния професионален регистър на строителя и във връзка с чл. 137, ал. 1 от ЗУТ

НАРЕЖДАМ

Да се издаде Сертификат за акредитация с рег. № 232 ОКС от 26.11.2018 г., валиден до 26.11.2022 г, с приложение настоящата заповед, неделима част от него.
Сертификата за акредитация с приложението да се получат от Изпълнителният директор на „Старт инженеринг“ АД, гр. София, представител на „Старт инженеринг“ АД, гр. София, ръководителят на ИА БСА или друго упълномощено лице в сградата на ИА БСА.
При получаване на издадения сертификат и приложение, акредитираното лице е длъжно да върне в ИА БСА оригиналите на сертификат за акредитация рег. № 232 ОКС от 25.01.2016г. и приложение - заповед на ИА БСА № А 59/25.01.2016г.
Настоящата заповед да се съобщи на „Старт инженеринг“ АД, гр. София в 3 (три) - дневен срок от изд

Получих, запознах се и приемам приложението Общи условия на задължителна застраховка "Професионална отговорност на участниците в проектирането и строителството" и Клауз „Професионална отговорност на проектанта“, които заедно с настоящата полizza и попълненото Заявление-Въпросник, формират застрахован

На основание чл.36а ал.3 от
ЗАСТРАХОВАТЕЛЕН БРОКЕР ООД

ЗАСТРАХОВАТЕЛНА ПОЛИЦА

№ 212218213000421 / 01.11.2018

ПО ЗАДЪЛЖИТЕЛНА ЗАСТРАХОВКА "ПРОФЕСИОНАЛНА ОТГОВОРНОСТ НА УЧАСТНИЦИТЕ В ПРОЕКТИРАНЕТО И СТРОИТЕЛСТВОТО"

"ДЗИ - ОБЩО ЗАСТРАХОВАНЕ" ЕАД, ЕИК 121718407, АДРЕС: РЕПУБЛИКА БЪЛГАРИЯ, ГР.СОФИЯ 1000, БУЛ. "ВИТОША", 89Б, НА ОСНОВАНИЕ ПЛАТЕНА ПРЕМИЯ И СЪГЛАСНО ОБЩИТЕ УСЛОВИЯ НА ЗАДЪЛЖИТЕЛНА ЗАСТРАХОВКА "ПРОФЕСИОНАЛНА ОТГОВОРНОСТ НА УЧАСТНИЦИТЕ В ПРОЕКТИРАНЕТО И СТРОИТЕЛСТВОТО" И КЛАУЗА "ПРОФЕСИОНАЛНА ОТГОВОРНОСТ НА СТРОИТЕЛЯ", ПРИЕМА ДА ЗАСТРАХОВА В РАМКИТЕ НА ЛИМИТИТЕ, СРОКОВЕТЕ И УСЛОВИЯТА НА НАСТОЯЩАТА ПОЛИЦА:

ЗАСТРАХОВАЩ:	Име: "СТАРТ-ИНЖЕНЕРИНГ" АД ЕИК: 030217255 Адрес: гр. София 1000, УЛ. АКОМОТИВ, № 3 Представлявано от: Георги Георгиев, Стоил Стоев		
ЗАСТРАХОВАН:	Име: "СТАРТ-ИНЖЕНЕРИНГ" АД ЕИК: 030217255 Адрес: гр. София 1000, УЛ. АКОМОТИВ, № 3 Представлявано от: Георги Георгиев, Стоил Стоев		
ПРЕДМЕТ НА ЗАСТРАХОВКАТА:	Професионалната отговорност на Застрахования за вреди, причинени на другите участници в строителството и/или на други трети лица, вследствие на неправомерни действия или бездействия на Застрахования, извършени при или по повод съществуване на професионалната му дейност.		
ЗАСТРАХОВАТЕЛНО ПОКРИТИЕ:	Съгласно приложените Общи условия на задължителна застраховка "Професионална отговорност на участниците в проектирането и строителството" и Клауза "Професионална отговорност на строителя".		
ПРОФЕСИОНАЛНА ДЕЙНОСТ НА ЗАСТРАХОВАНИЯ:	Цялостно изпълнение на строителство или на отделни строително-монтажни работи на обекти от първа категория и всяка по-ниска категория, съгласно действащото законодателство.		
ЛИМИТИ НА ОТГОВОРНОСТ:	За едно събитие: 300,000 лв. Агрегатен лимит: 600,000 лв.		
САМОУЧАСТИЕ НА ЗАСТРАХОВАНИЯ:	Не се прилага.		
СРОК НА ЗАСТРАХОВКАТА:	1 година НАЧАЛО: 00:00 часа на 05.11.2018 г. КРАЙ: 24:00 часа на 04.11.2019 г.		
РЕТРОАКТИВНА ДАТА:	05.11.2013 г.		
ЗАСТРАХОВАТЕЛНА ПРЕМИЯ:	660.00 лв.		Словом: шестстотин шестдесет лв.
ДАТА НА ПЛАЩАНЕ:	04.11.2018 г.		
ДАНЪК 2% ВЪРХУ ЗП:	13.20 лв.		
ОБЩА ДЪЛЖИМА СУМА: (Дължима застрахователна премия + данък 2% върху ЗП)	673.20 лв.		Словом: шестстотин седемдесет и три и 0.20 лв.
СПЕЦИАЛНИ ДОГОВОРЕНОСТИ:	Ако след сключване на застраховката Застрахованият започне да съществува дейност, свързана с категория строежи, за които са предвидени по-високи минимални лимити на отговорност, той е длъжен да уведоми Застрахователя съгласно ОУ на задължителна застраховка "Професионална отговорност на участниците в проектирането и строителството" и да сключи анеко за увеличаване на лимитите по застрахователния договор срещу заплащане на допълнителна премия.		

Декларiram, че ми е предоставена информацијата по чл.324 и чл. 326 от КЗ преди сключване на настоящия договор и съм информиран от застрахователя за обстоятелствата по чл. 19 от ЗЗДД, получил съм Общите условия, съдържащи информация съгласно ЗЗДД; предоставям доброволно личните си данни, като условие за сключване на договор със застрахователя и във връзка с изпълнението на задълженията му, като страна по възникналото правоотношение; давам изричното съгласие застрахователят да обработва предоставените от мен лични данни, да изисква и получава от трети лица мои лични данни, обработвани от тях в качеството им на администратори, да използва личните ми данни за предлагане на застрахователни услуги по директен начин и за проучване, относно предлаганите застрахователни продукти и услуги, да предоставя личните ми данни на трети лица.

Настоящата поллица се издава в еднообразни екземпляра - по един за Застрахователя и за Застраховация.

Дата и място на сключване: 01.11.2018 г. в град Пловдив

Стр. 9 от 9

УДОСТОВЕРЕНИЕ

за добро изпълнение

„ЧЕЗ РАЗПРЕДЕЛЕНИЕ БЪЛГАРИЯ“ АД, в качеството си на Възложител, издава настоящото удостоверение за добро изпълнение на „СТАРТ-ИНЖЕНЕРИНГ“ АД, в качеството си на Изпълнител, в уверение на това, че дружеството разполага с необходимия капацитет да проектира, извършва доставки и изпълнява строително-монтажни работи, и пуско-наладъчни работи в енергетиката.

„СТАРТ-ИНЖЕНЕРИНГ“ АД изпълни в съкратени срокове и с високо качество, и в съответствие с нормативните изисквания задълженията си по Договор № 17-371 от 25.08.2017г., с предмет: „Проектиране, доставка и монтаж на нова комплектна разпределителна уредба 20kV от модулен тип и цифрови защиti във възлова разпределителна станция „Кокаляне“ 20/20kV“, поръчка № 01467-2017-0043 на общa стойност 363 770,61 лв. /триста шестдесет и три хиляди седемстотин и седемдесет лева и шестдесет и една стотинки/.
Допълнителна информация:

- Дата на започване на работите по договора: 28.08.2017г.,
- Дата на завършване на работите по договора: 23.11.2017г.,
- Място на изпълнение: с. Кокаляне, община Столична, област София-град.

Изпълнените работи по договора включват:

1. Проектиране:

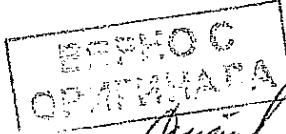

- Изготвяне на работен проект за нова комплектна разпределителна уредба (КРУ) 20kV от модулен тип с нови цифрови защиti във възлова разпределителна станция „Кокаляне“ 20/20kV, съгласно изискванията на Възложителя;
- Съгласуване на работния проект с „ЧЕЗ Разпределение България“ АД.

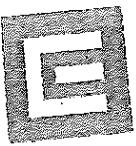

2. Доставка на нови съоръжения и оборудване, съгласно утвърдения работен проект:

- Доставка на нова комплектна разпределителна уредба (КРУ) 20kV от модулен тип – 8 модула;
- Доставка на нови цифрови защиti – 9 броя;
- Доставка на Обемна клетка, изработена от стоманени и алуминиеви профили за монтаж на КРУ модули върху съществуваща бетонна площадка;
- Доставка на нова самостоятелна метална конструкция с оборудване за монтаж на трансформатор „собствени нужди“ 20/0,4kV на обекта.

3. Строително монтажни работи:

- Разглобяване на метална конструкция, в която са монтирани комплектни разпределителни устройства 20kV от модулен тип на обекта;
- Демонтаж на съществуващи комплектни разпределителни устройства 20kV в обекта, включително и вериги за вторична комутация към всеки модул;
- Провеждане на входящ контрол при влагане на новото оборудване на обекта;
- Монтаж на нова комплектна разпределителна уредба (КРУ) 20kV от модулен тип върху съществуваща площадка, включително и монтаж на нови цифрови релейни защиti във всеки модул;

- Сглобяване на метална конструкция, в която е монтирана новата комплектна разпределителна уредба (КРУ) 20kV от модулен тип;
 - Монтаж на трансформатор „собствени нужди“ 20/0,4kV в нова самостоятелна метална конструкция;
 - Монтаж на нова самостоятелна метална конструкция с оборудване и трансформатор „собствени нужди“ 20/0,4kV (МТТ) върху съществуващ метално решетъчен стълб 20kV (№ 1 ВЕЛ 20kV „Плана“ в непосредствена близост до обекта;
4. Наладка и настройки, включително и вериги за телемеханика (SCADA) на новомонтирани съоръжения и оборудване във възлова разпределителна станция „Кокаляне“ 20/20kV;
- Провеждане на пълни електрически измервания и изпитвания на новомонтирани съоръжения и оборудване във възлова разпределителна станция „Кокаляне“ 20/20kV, съгласно изискванията на Наредба № 3 за устройство на електрическите уредби и електропроводни линии, част осма „Предавателно-приемни изпитвания на електрически съоръжения“, раздел единадесети „Комплектни разпределителни уредби“ и издаване на протоколи от акредитирана лаборатория;
 - Провеждане на единични функционални преби на новомонтирани съоръжения и оборудване във възлова разпределителна станция „Кокаляне“ 20/20kV.
 - Въвеждане на новата комплектна разпределителна уредба (КРУ) 20kV от модулен тип в редовна експлоатация;
 - Провеждане на комплексни 72 часови преби под напрежение и товар на новомонтирани съоръжения и оборудване във възлова разпределителна станция „Кокаляне“ 20/20kV;
 - Въвеждане в експлоатация възлова разпределителна станция „Кокаляне“ 20/20kV след успешно проведени 72 часови преби под напрежение и товар;
5. Обучение на специалисти на възложителя:
- Изготвяне на програма за обучение на специалисти на възложителя;
 - Обучение и сертифициране на 6 /шест/ специалиста на възложителя;
 - Предаване на възложителя на всички необходими документации и материали, включително софтуер и инструкции за работа с нова КРУ 20kV с новомонтирани цифрови защити (на български език).
6. Изготвяне на екзекутивна документация

ОБЩА ДЪЛЖИМА СУМА:

СРОК ЗА ПЛАЩАНЕ: 21.03.2018 г.

Писменото предложение или искане до застрахователя за склучване на застрахователен договор и писмените отговори на застрахования и/или застрахования на поставени от застрахователя въпроси относно обстоятелства, имащи значение за естеството и размера на риска, общите условия на застраховката, приложениета, добавъците и други писмени договорености между страните (ако има такива), представляват неразделна част от настоящата полizza.

С подписа си по-долу Застрахованият удостоверява, че е съгласен и приема общите условия към настоящата полizza, екземпляр от които са му предадени към момента на подписване на полizzата, както и че му е предоставена информация относно Застрахователя по чл. 324 ал.1 от Кодекса за застраховане.

В случай на неплащане или непълно плащане на дължима вноска от застрахователната премия, застраховката се прекратява към 24.00 часа на 15-ия ден, считано от датата на съответния падеж, посочен в застрахователната полizza.

На основание чл.36а ал.3 от ЗОП

ДЕКЛАРАЦИЯ

Долуподписаният инж. Валентин Христов Христов, На основание чл.36а ал.3 от ЗОП
гр. София, ПК 1000, ул. «Димитър Хаджиоцев» №: 77, в качеството си на трето лице за
процедурата - Проектант по част „Конструктивна“ към участника «Старт инженеринг»
АД, за участие в процедура за изпълнение на поръчка с предмет: „Модернизация
(ретрофит) на възлови разпределителни станции 20 (10) кV и изграждане на вериги на
телемеханика, реф. № PPD 18-103 - Обособена позиция 1 /ОП 1/ - Модернизация (ретрофит
/проектиране, реконструкция, доставка и монтаж на машини и съоръжения, подготовка и
въвеждане в експлоатация/) на възлови разпределителни станции 20 (10) кV и изграждане
на вериги на телемеханика в регион „София“ и регион „София област“,

чиито капацитет ще се използва за доказване на съответствие с критериите, свързани с
икономическото и финансовото състояние от участника „Старт Инженеринг“ АД, ЕИК
030217255, със седалище и адрес на управление в гр. София 1220, ул. Локомотив № 3,
България, с настоящото

ДЕКЛАРИРАМ, ЧЕ:

Се задължавам в качеството си на трето лице - Проектант по част
„Конструктивна“ за участник „Старт инженеринг“ АД да участвам пряко в
изпълнението на поръчката по проект: „Модернизация (ретрофит) на възлови
разпределителни станции 20 (10) кV и изграждане на вериги на телемеханика, реф. №
PPD 18-103 - Обособена позиция 1 /ОП 1/ - Модернизация (ретрофит /проектиране,
реконструкция, доставка и монтаж на машини и съоръжения, подготовка и
въвеждане в експлоатация/) на възлови разпределителни станции 20 (10) кV и
изграждане на вериги на телемеханика в регион „София“ и регион „София област“ за
цялото време на изпълнение на поръчката, включително и в случаите на удължавания на
срока на изпълнение и произтичащи от приложимото законодателство изискуеми
ангажименти с оглед експертното ми участие, които са заложени в конкурсната
документация.

Единен идентификационен код: BG 030217255,

Представлявано от Стоил Колев Стоилов - Председател на Съвета на директорите на „Старт-Инженеринг“ АД

Лице за контакти: Димитър Нинов Тодоров, тел.: 02 936146, факс: 02 9319966, e-mail: sofia@starteng.com

УВАЖАЕМИ ГОСПОЖИ И ГОСПОДА,

След като се запознахме с изискванията на възложителя за изпълнение на обществена поръчка с реф. № PPD 18-103 и предмет: „Модернизация (ретрофит) на възлови разпределителни станици 20 (10) kV и изграждане на вериги на телемеханика, аз допускам, че обособена позиция 1, в качеството си на представител на "Старт-Стоилов" обособена позиция 1, в качеството си на представител на "Старт-Инженеринг" АД, декларирам, че:

В случай че бъдем определени за изпълнител на обществената поръчка, декларираме, че:

1. Ще изпълняваме договора съгласно техническите изисквания на възложителя, представени в т. 4 "от раздел I. на документацията за участие и съгласно Техническите спецификации и изискванията на възложителя за изпълнение на поръчката (Раздел II) от документацията за участие. Всички материали, апаратура, оборудване, съоръжения и резервни части, които ще доставим и ще влагаме при изпълнение на предмета на поръчката ще са нови, неупотребявани, придружени от декларации и/или сертификати/декларации за съответствие, съгласно изискванията на Техническите спецификации от изискванията на възложителя за изпълнение на поръчката.

2. Задължаваме се при всяка доставка на материал и/или апаратура и/или оборудване и/или съоръжение и/или резервни части, същите да бъдат придружени от изискуемите документи съгласно договора и приложението към него.

3. Представяме изисканата информация в Техническо предложение за оборудване –

Приложение 2 към настоящото Предложение за изпълнение на поръчката, като:

4.1. Представям попълнено „Гарантирано предложение“ в таблиците с технически данни. Предлаганото от нас оборудване отговаря на минималните технически изисквания на възложителя, които не съдържат графа „Гарантирано предложение“ в таблиците на техническите спецификации на стоката от раздел II. „Технически спецификации и изисквания на възложителя за изпълнение на поръчката“ от документацията за участие.

4.2. Представям всички изисквани данни и документи от таблиците с Изисквания към документацията и изпитанията. Запознат съм с изискването, че представените документи трябва да бъдат на български език или с превод на български език, придружени с оригиналните документи, с изключение на каталозите и протоколи от изпитания /в случай, че се изискват/ за материалите, които могат да се представят и само на английски език.

При представяне на цял каталог следва допълнително да представя и информация с номер на страница и позиция на съответен технически параметър в каталога.

63

4. Запознат съм, че представените от нас технически документи са доказателство за декларираните технически данни и параметри на предлаганото оборудване.
5. Заязваме, че предлаганите от нас материали, апаратура, оборудване, съоръжения и резервни части са с технически характеристики покриващи посочените от възложителя в раздел II. „Технически спецификации и изисквания на възложителя за изпълнение на поръчката“ от документацията за участие.
6. Ще изпълняваме договора съгласно техническите изисквания на възложителя, представени в раздел II. «Технически спецификации и изисквания на възложителя за изпълнение на поръчката» от документацията за участие, които са включени като Приложение № 3 към договора за изпълнение на обществената поръчка.
7. Потвърждаваме, че доставяните от нас материали, апаратура, оборудване и съоръжения ще отговарят на посочените от възложителя стандарти или на еквивалентни. В случай, че даден материал, апаратура, оборудване и съоръжение отговаря на стандарт, еквивалентен на посочения от Възложителя в раздел II. „Технически спецификации и изисквания на възложителя за изпълнение на поръчката“ от документацията за участие, се задължаваме да го отразим в отделен документ и да представим доказателства за еквивалентността на двата стандарта заедно с настоящото предложение за изпълнение на поръчката.
8. С настоящото гарантираме, че ще изпълним сроковете за изпълнение на поръчката, определени в Приложение 1 към настоящото Техническо предложение.
9. Гарантираме, че предложеното оборудване за Комуникация на цифрови защити /ЦЗ/ и контролер с RTU отговаря на посочените в Приложение 3 минимални технически изисквания на Възложителя.
10. Предлагаме гаранционни срокове:
- 10.1. за новодоставленото оборудване (прекъсвачи, разединители, токови и напреженови измервателни трансформатори, вентилни отводи и друго) е 3 години (не по-кратък от 3 години, считано от деня на въвеждането на строителния обект в експлоатация).
 - 10.2. за цифрови устройства за релейни защити и апаратура за ТМ, ТИ, С и ТК е 5 години (не по-кратък от 5 години), считано от датата на подписване на приемо – предавателен протокол между Възложител и Изпълнител при доставка.
 - 10.3. за строителните работи гаранционните срокове съответстват на минималните гаранционни срокове, посочени в Наредба № 2 от 31 юли 2003 г. за въвеждане в експлоатация на строежите в Република България и минималните гаранционни срокове за изпълнени строителни и монтажни работи, съоръжения и строителни обекти.
11. Задължаваме се в рамките на гаранционните срокове всички разходи по отстраняване на дефекти или замяна на дефектни материали, апаратура, оборудване, съоръжения и резервни части с нови, включително демонтаж, товарене, транспорт, разтоварване и монтаж (инсталација) да са за наша сметка.

Участникът да представи необходимата техническа документация (включително част от каталоги), даваща пълно описание, технически данни и характеристики на конкретното предлагано оборудване (съобразно техническите параметри на Таблиците на Възложителя) при представяне на оферта. При представяне на цял каталог участникът допълнително да представи информация с номер на страница и позиция на съответен технически параметър в каталога.

Неразделна част от настоящото предложение са следните приложения:

Приложение № 1 - Срокове за изпълнение на дейностите;
Приложение № 2 - Техническо предложение за оборудване;

На основание чл.36а ал.3 от ЗОП

Дата 17.12.2018 г.

ПОДПИС И ПЕЧАТ:

Председател на Съвета на директорите
на „Старт-Инженеринг“ АД

ПРИЛОЖЕНИЕ 1

СРОКОВЕ ЗА ИЗПЪЛНЕНИЕ НА РЕТРОФИТА

Срокът на договора за изпълнение на общината поръчка за всяка обособена позиция е четири календарни години (48 месеца), считано от датата, на която е сключен или до достигане на стойността, за която е сключен, в зависимост от това кое събитие ще настъпи първо по време. При настъпване на първото по време от тези събития, договорът ще се счита за автоматично прекратен без да е необходимо уведомление или предизвестие на която и да е от страните до другата страна.

СРОКОВЕ ЗА ИЗПЪЛНЕНИЕ НА МОДЕРНИЗАЦИЯТА (РЕТРОФИТ) ЗА КОНКРЕТЕН ЕНЕРГИЕН ОБЕКТ ОТ СЪОТВЕТНА ОБОСОБЕНА ПОЗИЦИЯ:

1. Изготвяне на линеен график и работен проект:

Срокът за изготвяне на линеен график и на работен проект за конкретен енергиен обект от съответна обособена позиция е до 10 дни, след получаване на възлагателен протокол/поръчка.

2. Съгласуване на работния проект с „ЧЕЗ Разпределение България“ АД;

Срокът за съгласуване на работния проект за конкретен енергиен обект от съответна обособена позиция е до 5 дни след датата на предаването му на Възложителя.

3. Доставка на материали, апаратура, оборудване и съоръжения, съгласно съгласувания работен проект:

Срокът за доставка на необходимите материали, апаратура, оборудване и съоръжения за изпълнение на съгласувания работен проект и резервните части за конкретен енергиен обект от съответна обособена позиция, включително и изработката на врати и детайли в заводски условия, е до 60 дни след датата на получаване на възлагателен протокол/поръчка, по количествено – стойностни сметки към договора и изготвения проект.

4. CMP за изпълнение на модернизация (ретрофит) на възлова станция Ср.Н., от съответна обособена позиция:

CMP за изпълнение на модернизация (ретрофит) на конкретен енергиен обект (възлова станция Ср.Н) от съответна обособена позиция, включително и веригите за телемеханика, вторична комутация е до общо 20 дни от датата на получаване на възлагателен протокол/поръчка. CMP ще бъде възложено след съгласуван работен проект и доставени материали, апаратура, оборудване и съоръжения, необходими за изпълнението на модернизация (ретрофит).

- Срокът за CMP за изпълнение на модернизация (ретрофит) ще бъде разделен на: присъединение Ср.Н. от конкретния енергиен обект по избор е до 3 дни от датата на получаване на възлагателен протокол/поръчка;

- Срокът за CMP за изпълнение на модернизация (ретрофит) на едно линейно енергиен обект е до 17 дни от датата на получаване на възлагателен протокол/поръчка;

- Срокът за обучение на специалисти на Възложителя: Срокът за изготвяне на програма за обучение на специалисти служители на Възложителя и предаването й за одобрение е до 5 дни, считано от датата на съгласуване на работния проект от Възложителя и предаването му на Изпълнителя;

- Срокът за одобрение на програма за обучение е до 2 дни след датата на предаването й на Възложителя.

- Срокът за провеждане на обучението и сертифицирането на служители на Възложителя и работа и поддръжка на новоизградените съоръжения, цифрови устройства и др. е до 10 дни, след датата на одобрение на програмата за обучение от Възложителя.

6. Предоставяне на екзекутивна документация:

Срокът за предоставяне на екзекутивни чертежи с нанесе всички изменения, настъпили в процеса на модернизацията (ретрофит) на конкретен енергиен обект от съответна обособена позиция, е до 5 дни след приключване на CMP в целия обем, но не по-късно от датата на провеждане на 72 часови проби под напрежение и товар.

7. Провеждане на 72 часови проби под напрежение и товар:

Провеждане на 72 часови проби под напрежение и товар и въвеждане на енергийния обект в режим на телемеханика стаптират от момента на подписане на протокол от вътрешната приемателна комисия за приемане на ретрофита /modернизацията/ на конкретен енергиен обект от Обособена позиция в пълен обем.

На основание чл.36а ал.3 от ЗОП

ПОДПИС И ПЕЧАТ:

ПРИЛОЖЕНИЕ 2
Техническо предложение за оборудване

Участникът следва да попълни тип/референтен номер, съгласно каталог на производител, производител и декларация, че предлаганото от него оборудване отговаря на минималните технически изисквания на Възложителя, посочени в таблиците.

A) ТРИПОЛЮСНИ ВАКУУМНИ ПРЕКЪСВАЧИ, 24 кV, ЗА МОНТИРАНЕ НА ЗАКРИТО, ФИКСИРАН МОНТАЖ С ТЕХНИЧЕСКИ ХАРАКТЕРИСТИКИ В ТАБЛИЦА 1

- Технически данни за триполюсни вакуумни прекъсвачи, 24 kV, 1250 A, за монтиране на закрито, фиксирани:

Наименование на материала		Триполюсен вакуумен прекъсвач, 24 kV/1250 A/20 kA, за монтиране на закрито, фиксиран
№	Технически параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	ЗАЕ5
2.	Производител	Siemens AG

- Технически данни за триполюсни вакуумни прекъсвачи, 24 kV, 630 A, за монтиране на закрито, фиксирани:

Наименование на материала		Триполюсен вакуумен прекъсвач, 24 kV/630 A/20 kA, за монтиране на закрито, фиксиран
№	Технически параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	ЗАЕ5
2.	Производител	Siemens AG

- Изискуема документация, която се предоставя от Участника при подаване на офертата на хартиен носител за всяка обособена позиция:

№	Наименование на документацията	Представени документи
1.	Техническо описание на прекъсвача, в т.ч. гарантирани параметри и съоръжаване	Приложение 1.1
2.	Протоколи от типови изпитвания на английски или български език, проведени от независима акредитирана изпитвателна лаборатория – заверени копия (и допълнителни изпитвания, ако са проведени), с приложен списък на отделните изпитвания на български език.	Приложение 1.2
3.	Сертификат/акредитация на независимата изпитвателна лаборатория, провела типовите изпитвания – заверено копие	Приложение 1.3
4.	Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 1	Приложение 1.4

Б) ТОКОВИ ТРАНСФОРМАТОРИ 24 kV ЗА МОНТИРАНЕ НА ЗАКРИТО, ФИКСИРАН МОНТАЖ С ТЕХНИЧЕСКИ ХАРАКТЕРИСТИКИ В ТАБЛИЦА 2

- Технически данни за триполюсни вакуумни прекъсвачи, 24 kV, 1250/5/5 A, за монтиране на закрито, фиксирани; за Токови измервателни трансформатори 24 kV, 400/5/5 A за монтиране на закрито:

Наименование на материала		Токов измервателен трансформатор 24 kV, 1250/5/5 A за монтиране на закрито
№	Параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	4MA74
2.	Производител	Siemens AG

- Технически данни за триполюсни вакуумни прекъсвачи, 24 kV, 400/5/5 A, за монтиране на закрито, фиксирани:

Наименование на материала		Токов измервателен трансформатор 24 kV, 400/5/5 A за монтиране на закрито
№	Параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	4MA74
2.	Производител	Siemens AG

- Изискуема документация, която се предоставя от Участника при подаване на офертата на хартиен носител за всяка обособена позиция:

№	Наименование на документацията	Предоставени документи
1.	Точно обозначение на типа на токовите измервателни трансформатори, производителя и страната на произход и последно издание на каталога на производителя	4MA74 Siemens AG-АЛЧЕ Турция Приложение 2.1
2.	Удостоверение за одобряване на типа на токовите измервателни трансформатори, издадено по реда и при условията на Закона за измерванията	Приложение 2.2
3.	Протоколи от типови изпитвания на токовите измервателни трансформатори на английски или български език, проведени от независима изпитателна лаборатория с приложени резултати от изпитванията, представени при доставка	Приложение 2.3
4.	Сертификат/акредитация на независимата изпитателна лаборатория, провела типовите изпитвания – заверено копие	Приложение 2.4
5.	Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 2	Приложение 2.5

Б) НАПРЕЖЕНОВИ ТРАНСФОРМАТОРИ 24 KV, ЕДНОПОЛЮСЕН, С ДВЕ ВТОРИЧНИ НАМОТКИ, ЗА МОНТИРАНЕ НА ЗАКРИТО С ТЕХНИЧЕСКИ ХАРАКТЕРИСТИКИ В ТАБЛИЦА 3

- Технически данни:

Наименование на материала		Напреженов измервателен трансформатор 24 kV, еднополюсен, с две вторични намотки, за монтиране на закрито
№	Параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	4MR14
2.	Производител	Siemens AG

- Изискуема документация, която се предоставя от Участника при подаване на офертата на хартиен носител за всяка обособена позиция:

67

№	Наименование на документацията	Представени документи
1.	Точно обозначение на типа на напреженовия трансформатор (НИТ), производителя и страна на произход и последно издание на каталога на производителя	4MR14 Siemens AG- АЛЧЕ Турция Приложение 3.1
2.	Удостоверение за одобряване на типа на НИТ, издадено по реда и при условията на Закона за измерванията	Приложение 3.2
3.	Протокол от първоначална метрологична проверка, проведена от оправомощена лаборатория, съгласно действащото в Република България законодателство в областта на измерванията (представя се при доставка за всеки НИТ)	Приложение 3.3
4.	Сертификат/акредитация на независимата изпитателна лаборатория, провела типовите изпитвания – заверено копие	Приложение 3.4
5.	Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 3	Приложение 3.5

Г) ТРИПОЛЮСНИ ВАКУУМНИ ПРЕКЪСВАЧИ, 12 kV, ЗА МОНТИРАНЕ НА ЗАКРИТО, ФИКСИРАН МОНТАЖ С ТЕХНИЧЕСКИ ХАРАКТЕРИСТИКИ В ТАБЛИЦА 4

- Технически данни за триполюсни вакуумни прекъсвачи, 12 kV, 1250 A, за монтиране на закрито, фиксирани:

Наименование на материала		Триполюсен вакуумен прекъсвач, 12 kV/1250 A/20 kA, за монтиране на закрито, фиксиран
№	Технически параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	ЗАЕ5
2.	Производител	Siemens AG

- Технически данни за триполюсни вакуумни прекъсвачи, 12 kV, 630 A, за монтиране на закрито, фиксирани:

Наименование на материала		Триполюсен вакуумен прекъсвач; 12 kV/630 A/20 kA, за монтиране на закрито, фиксиран
№	Технически параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	ЗАЕ5
2.	Производител	Siemens AG

- Изискуема документация, която се предоставя от Участника при подаване на офертата на хартиен носител за всяка обособена позиция:

№	Наименование на документацията	Представени документи
1.	Техническо описание на прекъсвача, в т.ч. гарантирани параметри и съоръжаване	Приложение 4.1
2.	Протоколи от типови изпитвания на английски или български език, проведени от независима акредитирана изпитвателна лаборатория – заверени копия (и допълнителни изпитвания, ако са проведени), с приложен списък на отделните изпитвания на български език.	Приложение 4.2
3.	Сертификат/акредитация на независимата изпитвателна лаборатория, провела типовите изпитвания – заверено копие	Приложение 4.3

№	Наименование на документацията	Представени документи
4.	Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 4	Приложение 4.4

д) ТОКОВИ ТРАНСФОРМАТОРИ 12 KV ЗА МОНТИРАНЕ НА ЗАКРИТО, ФИКСИРАН МОНТАЖ С ТЕХНИЧЕСКИ ХАРАКТЕРИСТИКИ В ТАБЛИЦА 5

- Технически данни за триполюсни вакуумни прекъсвачи, 12 kV, 1250/5/5 A, за монтиране на закрито, фиксирани:

№	Наименование на материала	Параметър	Представени документи
1.	Тип/референтен номер съгласно каталога на производителя	4MA72	Токов измервателен трансформатор 12 kV, 1250/5/5 A за монтиране на закрито
2.	Производител	Siemens AG	Гарантирано предложение

- Технически данни за триполюсни вакуумни прекъсвачи, 12 kV, 400/5/5 A, за монтиране на закрито, фиксирани:

№	Наименование на материала	Параметър	Представени документи
1.	Тип/референтен номер съгласно каталога на производителя	4MA72	Токов измервателен трансформатор 12 kV, 400/5/5 A за монтиране на закрито
2.	Производител	Siemens AG	Гарантирано предложение

- Изискуема документация, която се предоставя от Участника при подаване на офертата на хартиен носител за всяка обособена позиция:

№	Наименование на документацията	Представени документи
1.	Точно обозначение на типа на токовите измервателни трансформатори, производителя и страната на произход и последно издание на каталога на производителя	4MA72 Siemens AG-АЛЧЕ Турция Приложение 5.1
2.	Удостоверение за одобряване на типа на токовите измервателни трансформатори, издадено по реда и при условията на Закона за измерванията	Приложение 5.2
3.	Протоколи от типови изпитвания на токовите измервателни трансформатори на английски или български език, проведени от независима изпитателна лаборатория с приложени резултати от изпитванията, представени при доставка	Приложение 5.3
4.	Сертификат/акредитация на независимата изпитателна лаборатория, провела типовите изпитвания – заверено копие	Приложение 5.4
5.	Декларация от Участника, че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя, посочени в таблица 5	Приложение 5.5

е) НАПРЕЖЕНОВИ ТРАНСФОРМАТОРИ 12 KV, ЕДНОПОЛЮСЕН, С ДВЕ ВТОРИЧНИ НАМОТКИ ЗА МОНТИРАНЕ НА ЗАКРИТО С ТЕХНИЧЕСКИ ХАРАКТЕРИСТИКИ В ТАБЛИЦА 6

- Технически данни:

Наименование на материала		Напреженов измервателен трансформатор 12 kV, еднополюсен, с две вторични намотки, за монтиране на закрито
№	Параметър	Гарантирано предложение
1.	Тип/референтен номер съгласно каталога на производителя	4MR12
2.	Производител	Siemens AG

Description

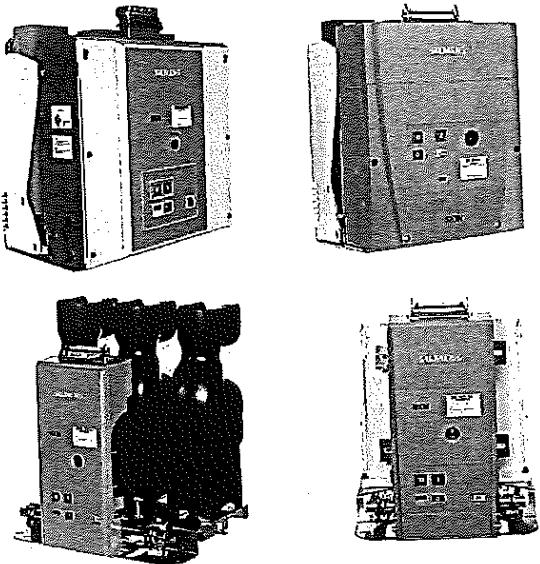

General information

SION Vacuum Circuit Breaker 3AE5 and 3AE1 from 7.2 kV to 24 kV – The Modular Devices

1

SION vacuum circuit breakers control all switching operations in medium-voltage distribution systems and are suitable for installation in all established and new air-insulated medium-voltage switchgear as well as for retrofitting existing switchgear. They are used for operation, for example, of overhead lines, cables, transformers, capacitors and motors. The optional installation accessories enable easy integration into switchgear panels, and, maximally equipped as a withdrawable module with an earthing switch, form almost the complete circuit breaker compartment inside the switchgear.

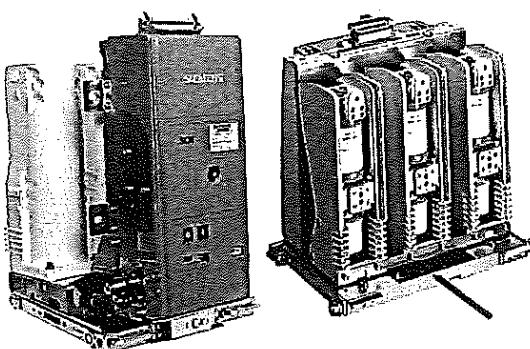

SION vacuum circuit breaker for fixed mounting

Thanks to a range of equipment options, SION vacuum circuit breakers can be precisely tailored to your requirements. This switching device can be mounted on a withdrawable part. Furthermore, mountable contact arms, contacts and bushings allow easy integration in your switchgear.

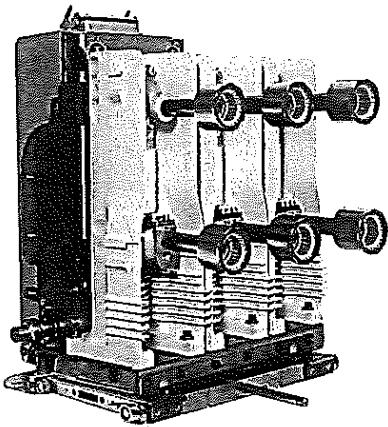

Our comprehensive range of circuit breakers offers a wide selection of pole-center distances and widths across flats as well as various equipment options for voltage levels from 7.2 kV to 24 kV. The withdrawable part, contact arms, contacts and bushings enable easy integration in all customary medium-voltage switchgear types. Identical dimensions and connection dimensions across several voltage levels reduce planning costs and the variety of panel versions. High reliability and availability are a matter of course, as are 10,000 maintenance-free operating cycles.

SION vacuum circuit breaker on withdrawable part

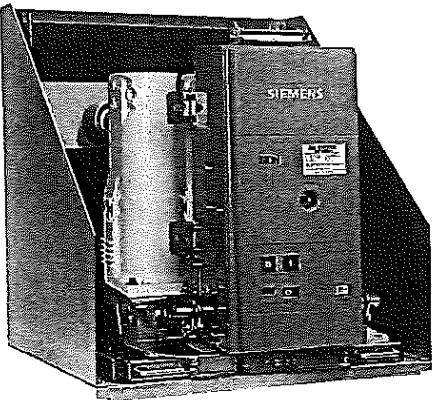

The circuit breaker mounted on a withdrawable part can be supplied both with and without contact arms and contacts.

SION vacuum circuit breaker on withdrawable part – with contacts

Withdrawable module with 3AE5 vacuum circuit breaker

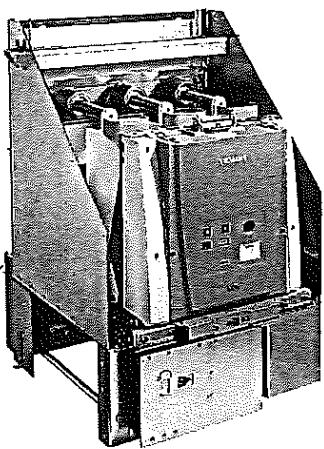

1

RH611-375.dwg

The SION vacuum circuit breakers can be supplied with contact arms and contacts.

The withdrawable module contains all components required for the circuit breaker compartment of a switchgear panel. It consists of the circuit breaker mounted on a withdrawable part, with contact arms, fitted in a cartridge with side and rear walls. The withdrawable module is equipped with bushings, fixed contacts, shutters and the shutter mechanism. The side and rear walls form the tested connection compartment.

Withdrawable module with earthing switch

RH611-362.dwg

The withdrawable module is also available with an earthing switch. It contains all components required for the circuit breaker compartment of a switchgear panel. It consists of the circuit breaker mounted on a withdrawable part, with contact arms, fitted in a cartridge with side and rear walls. The withdrawable module is equipped with bushings, fixed contacts, shutters and the shutter mechanism, as well as with a make-proof earthing switch. The side and rear walls form the tested connection compartment.

Description

Construction and mode of operation

1

Switching medium

Proven and fully developed for more than 40 years, vacuum switching technology is the principal arc-quenching element used in vacuum interrupters.

Pole assemblies

The pole assemblies consist of vacuum interrupters and pole shells. The vacuum interrupters are air-insulated and freely accessible. The pole assemblies are fixed on the mechanism mounting plate and supported by means of the pole shell (6). The vacuum interrupter (5) is mounted rigidly to the upper interrupter support. The lower part of the interrupter is guided into the lower interrupter support, allowing axial movement. The pole shell (6) absorbs external forces resulting from switching operations and the contact pressure.

Operating mechanism

The whole operating mechanism with motor (13), releases (11), indicators and actuating devices is mounted on the mechanism mounting plate (9). This compact design enables very fast operating times.

The circuit breaker operating mechanism is a stored-energy spring mechanism. The force is transmitted from the operating mechanism to the pole assemblies via operating levers. The closing spring (15) can be charged either electrically or manually, and latches in automatically when charging is complete. The closing spring (15) acts as a stored-energy mechanism.

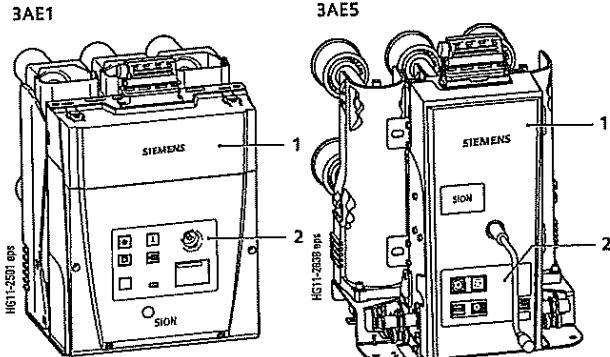

To close the breaker, the closing spring (15) can be unlatched either mechanically at the device (ON pushbutton), or electrically by remote control. The closing spring (15) charges the opening and/or contact-pressure springs (17) as the breaker closes. The now discharged closing spring (15) will be charged again automatically by the motor (13).

In this way, the stored-energy mechanism stores the OPEN – CLOSE – OPEN operating sequence that is required for an auto-reclosing operation on the system side. All stored-energy mechanisms perform the switching duties of synchronizing, rapid load transfer, and auto-reclosing.

Trip-free mechanism

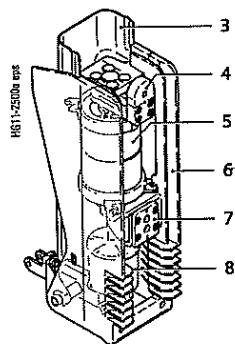

The circuit breakers have a trip-free mechanism. In the event of an opening command being given after a closing operation has been initiated, the moving contacts return to the open position and remain there even if the closing command is sustained. However, the vacuum circuit breaker contacts are momentarily in the closed position.

For charging the closing spring (15), the motor (13) operates in short-time duty. Therefore the voltage and power consumption might differ from the data of the motor rating plate.

Releases

A release is a device that transfers electrical commands from an external source, such as a control room, to the latching mechanism of the vacuum circuit breaker so that it can be opened or closed. The releases are designed for short-time duty up to 1 minute and are reset internally.

The various types of releases available are described in detail below:

Closing solenoid

The closing solenoid unlatches the charged closing spring of the vacuum circuit breaker, closing it by electrical means.

Shunt releases

Shunt releases are used for automatic tripping of the circuit breaker by suitable protection relays and for deliberate tripping by electrical means. They are intended for connection to an external power supply (DC or AC voltage).

Current-transformer-operated releases

Current-transformer-operated releases consist of a stored energy mechanism, an unlatching mechanism and an electromagnet system. They are used when there is no external source of auxiliary power (e.g. a battery). Tripping is effected by means of a protection relay (e.g. overcurrent time protection) acting on the current-transformer-operated release.

Undervoltage releases

Undervoltage releases consist of a stored-energy mechanism, an unlatching mechanism and an electromagnet system that is permanently connected to the secondary or auxiliary voltage while the circuit breaker is closed. If the voltage falls below a predetermined value, unlatching of the release is enabled and the circuit breaker is opened via the stored-energy mechanism.

A maximum of two releases can be fitted as described on page 36. The consumption data of the releases is listed on page 87/88.

Closing and anti-pumping

In the standard version, the circuit breakers can be closed electrically via remote. In addition, they can be mechanically closed locally by direct unlatching of the closing spring. If constant electrical signals for CLOSE and OPEN commands are present at the circuit breaker at the same time, the circuit breaker will carry out an OPEN-CLOSE-OPEN or a CLOSE-OPEN operating sequence. A new CLOSE command is given only following a brief interruption of the closing signal. This prevents continuous closing and opening (= "pumping") operations.

Closing spring charged indication

The circuit breakers have a mechanically operated spring charged indicator. The charging status of the closing spring can also be queried electrically by means of an integrated position switch.

Circuit breaker tripping signal

During electrical opening, the NO contact S6 makes brief contact. This is often used to operate a hazard warning system which should respond to automatic tripping of the circuit breaker. In case of local control, the NO contact S6 does not close.

The corresponding circuit diagrams can be found in the associated circuit manuals. See also page 76.

Interlocking

Mechanical interlocking

At the interface of the mechanical interlocking of the circuit breaker, sensors on the switchgear side can check the switch position and prevent the associated disconnector from being operated while the circuit breaker is closed. The system also prevents the circuit breaker from being closed while the associated disconnector is in the fault position.

Circuit breakers mounted on withdrawable parts are mechanically interlocked so that the handle for racking the withdrawable part can only be inserted while the breaker is in the OPEN position. The lock of the withdrawable part can be released by operating the pushing handles and only while the withdrawable part is in the disconnected position.

If the circuit breaker on the withdrawable part is in an intermediate position (neither in the service nor in the disconnected position), operation is prevented by the mechanical interlocking.

An optional key-operated interlock enables mechanical closing only in combination with the operated lock.

Electrical interlocking

The auxiliary and signaling contacts which query the switch position of the circuit breaker or the position of the withdrawable part can be integrated in the switchgear interlocking concept. Furthermore, mechanical closing can also be prevented by means of an optional, electrical closing lock-out. in order to prevent impermissible switching sequences.

Low-voltage interface

The removable cover of the SION 3AE1 and 3AE5 vacuum circuit breakers enables easy access to the low-voltage interface. All customer-side control and signaling options are concentrated here.

Description

Construction and mode of operation

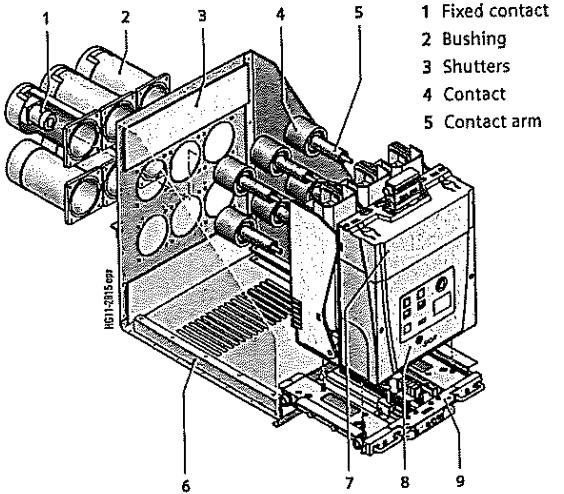

1

Withdrawable module

The withdrawable module contains all components required for the circuit breaker compartment of a switchgear panel. It consists of the circuit breaker mounted on a withdrawable part, with contact arms, fitted in a cartridge with side and rear walls. The withdrawable module is equipped with bushings, fixed contacts, shutters and the shutter mechanism. The side and rear walls form the tested connection compartment.

The circuit breaker on the withdrawable part is racked into the cartridge with the handle by rotating the spindle. The shutter mechanism is controlled by lateral gates, and the shutters are opened for contacting. Signals for the service and disconnected positions are transmitted to the module connector at the low-voltage interface of the vacuum circuit breaker via the position switches of the withdrawable part.

Withdrawable module 3AE1

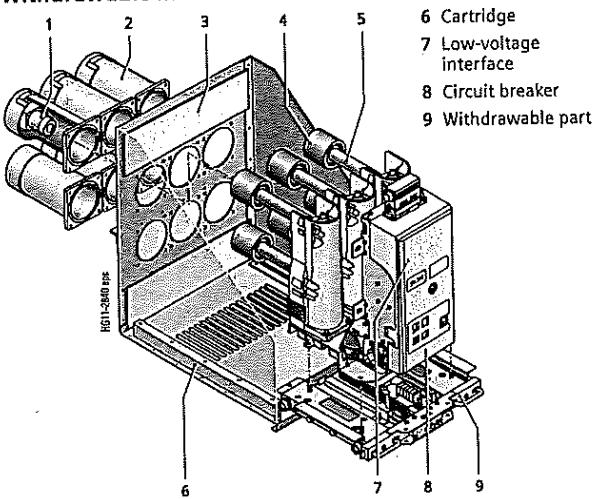

Withdrawable module with make-proof earthing switch

The make-proof earthing switch at the cartridge has a defined making capacity up to the values stated on the circuit breaker rating plate. It features a compact design with spring-operated mechanism and a switching angle of 90°, low torques for closing and opening, as well as low maintenance.

The make-proof earthing switch has been tested in the withdrawable module and complies with the relevant standards for the switchgear panels.

Withdrawable module 3AE5

Standards

The circuit breakers conform to the following standards:

- IEC 62271-1
- IEC 62271-100

All circuit breakers fulfill the endurance classes C2, E2, M2 and S1 according to IEC 62271-100, as well as the shortest rated operating sequence O - 0.3s - CO - 15s - CO.

3AE5 circuit breakers up to 12 kV / 31.5 kA / 1250 A comply with the DNVGL-CG-0339 classification for marine applications.

The withdrawable modules have been tested according to

- IEC 62271-200, 62271-1 and 62271-102 regarding
 - Dielectric strength
 - Temperature rise
 - Switching capacity.

For class C2, all circuit breakers comply with the following values acc. to IEC 62271-100.

Rated voltage U_r kV, r.m.s.	Line		Cable		Capacitors		Back-to-back capacitor bank	
	Rated line-charging breaking current I_{lb} A, r.m.s.	Rated cable-charging breaking current I_c A, r.m.s.	Rated single-capacitor-bank breaking current I_{ab} A, r.m.s.	Rated back-to-back-capacitor-bank breaking current I_{bb} A, r.m.s.	Frequency of the inrush making current f_{bi} Hz			
7.2	10	10	400	400	4250			
12	10	25	400	400	4250			
17.5	10	31.5	400	400	4250			
24	10	31.5	400	400	4250			

Rated back-to-back-capacitor-bank inrush making current – see chapter 3: Technical data

Maintenance-free design

The circuit breakers are maintenance-free:

- Under normal ambient conditions according to IEC 62271-1
- Up to 10,000 operating cycles maintenance-free
 - no regreasing
 - no readjusting
- Up to 30,000 operating cycles with maintenance work for the 3AE5

The ratings are independent within their tolerances of the switching frequency or standing times without switching.

Description

Ambient conditions, current carrying capacity and dielectric strength

1

**Ambient conditions**

The circuit breakers are designed for normal operating conditions as defined in IEC 62271-100. Condensation can occasionally occur under the ambient conditions shown opposite.

The circuit breakers are suitable for use in the following climatic classes according to IEC 60721, Part 3-3:

Climatic ambient conditions:	Class 3K4 ¹⁾
Biological ambient conditions:	Class 3B1
Mechanical ambient conditions:	Class 3M2
Chemically-active substances:	Class 3CS ³⁾
Mechanically-active substances:	Class 3S2 ²⁾

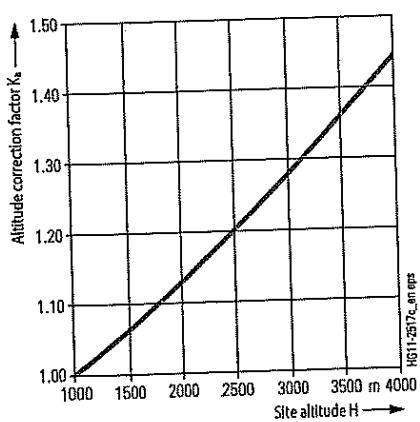

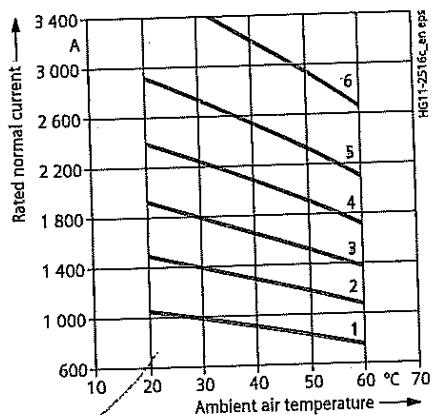

- 1) Lower temperature limit: -5 °C (with order code A40 down to -25 °C)
- 2) Restriction: Clean insulation parts
- 3) Without appearance of saline fog and simultaneous condensation

Current carrying capacity

The rated normal currents specified in the diagram have been defined according to IEC 62271-100 for an ambient air temperature of +40 °C and apply to open switchgear.

For enclosed switchgear, the data of the switchgear manufacturer applies.

At ambient air temperatures below +40 °C, higher normal currents can be carried (see diagram):

**Dielectric strength**

The dielectric strength of air insulation decreases with increasing altitude due to lower air density. According to IEC 62271-1, the rated lightning impulse withstand voltage and the rated short-duration power-frequency withstand voltage specified in chapter "Technical data" apply to a site altitude of 1000 m above sea level. For altitudes above 1000 m, the insulation level must be corrected according to the diagram shown opposite.

The characteristics curve shown applies to both rated withstand voltages.

When selecting the devices, the following applies:

$$U \geq U_0 \times K_a$$

U Rated withstand voltage under reference atmosphere
 U_0 Rated withstand voltage requested for the installation location
 K_a Altitude correction factor according to the diagram shown opposite

Example

For a requested rated lightning impulse voltage of 75 kV at an altitude of 2500 m, an insulation level of at least 90 kV under reference atmosphere is required:

$$90 \text{ kV} \geq 75 \text{ kV} \times 1.2$$

Equipment

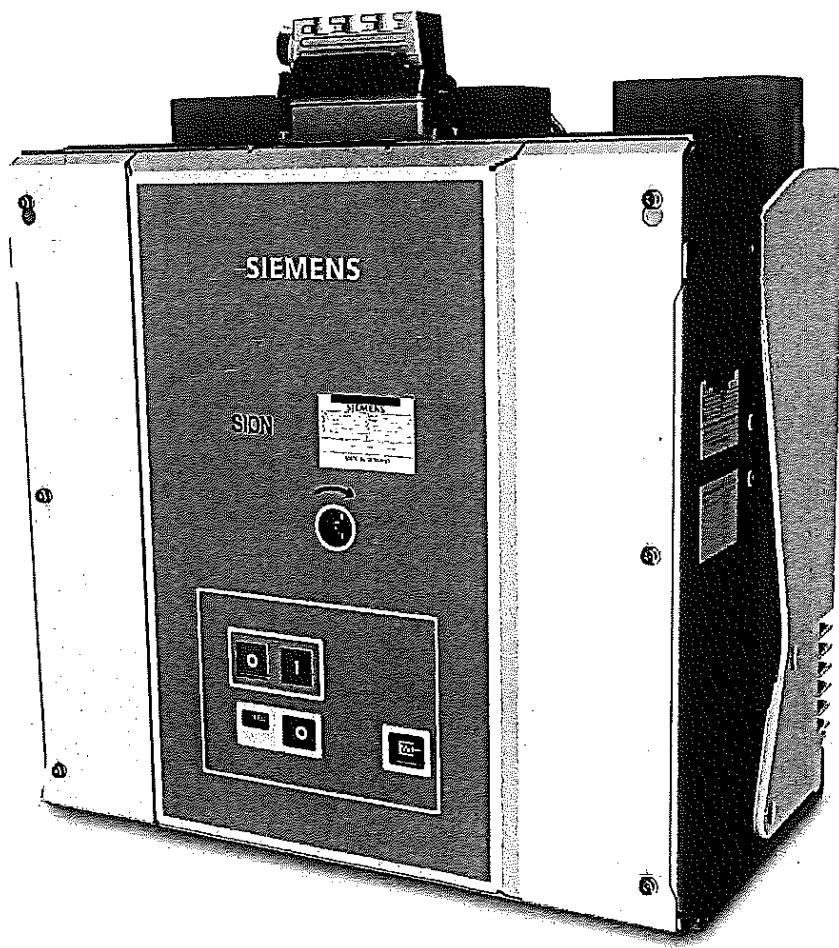

Features	Minimum equipment	Alternative equipment	Remarks
Operating mechanism	Electrical operating mechanism	None	Also for manual operation
Closing	Closing solenoid and mechanical manual closing	None	
1st release	Shunt release	Undervoltage release, c.t.-operated release	For SION 3AE5, only shunt releases are possible
2nd release	None	Shunt release, undervoltage release, c.t.-operated release	Combination of 2 undervoltage releases or 2 c.t.-operated releases is not possible for 3AE1
3rd release	None	Shunt release, c.t.-operated release	Only in combination with wide operating mechanism housing; combination of 2 undervoltage releases is not possible for 3AE5.
Varistor circuit	Standard for ≥ 60 V DC	None	For limiting switching overvoltages
Auxiliary switch	6 NO + 6 NC	12 NO + 12 NC	
Plug connection	27-pole terminal strip f. SION 3AE1 20-pole plug connector f. SION 3AE5	24-pole plug, 64-pole plug	12 NO + 12 NC not available with 24-pole plug
Anti-pumping	Available	None	
Circuit breaker tripping signal	None	Possible	
Operation cycles counter	Available	None	
Position switches for withdrawable part	5 momentary-contact position switches per position	None	
Interlocking	Mechanical interlocking available at the withdrawable module	Mechanical interlocking for circuit breaker Electrical closing lock-out for 3AE5 Key-operated interlocking	Required for withdrawable part
Installation type	Fixed-mounted	Withdrawable part with/without contact arms and contact, fixed contacts and bushings, withdrawable module with/without make-proof earthing switch

3AE1 vacuum circuit breaker as fixed-mounted version

Device selection

Article number structure

SION Vacuum Circuit Breakers 3AE5 and 3AE1

Article number structure

The circuit breakers consist of a primary and a secondary part. The primary part covers the main electrical data of the circuit breaker poles. The secondary part covers the auxiliary devices which are necessary for operating and controlling the vacuum circuit breaker. The relevant data makes up the 16-digit article number.

Order codes

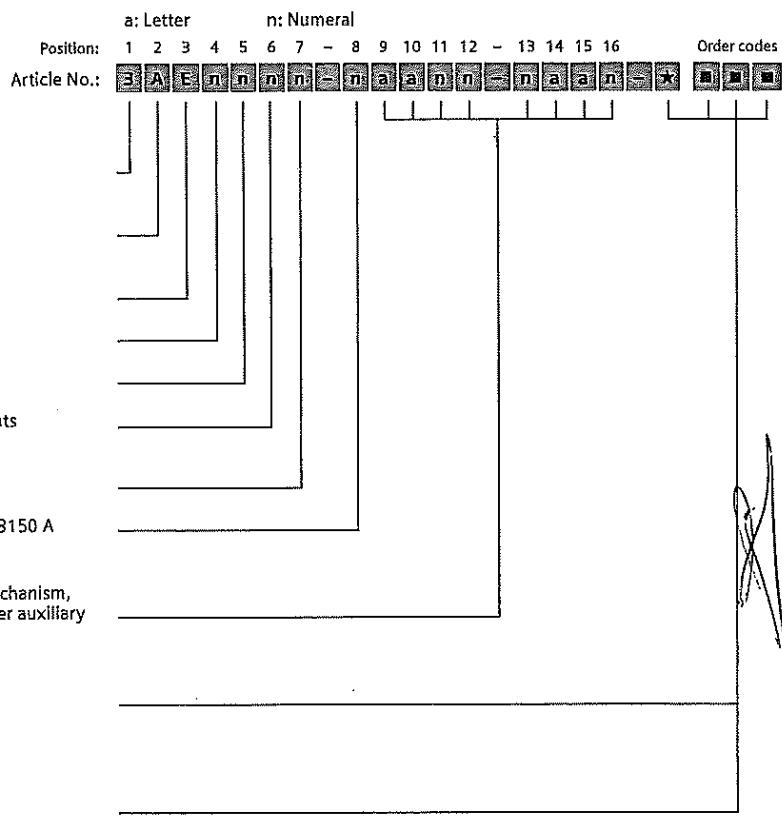

Individual equipment versions, marked with 9 or Z in the 9th to 16th position, are explained in more detail by a 3-digit order code. Several order codes can be added to the article number in succession and in any sequence.

Special versions (*)

In case of special versions, "-Z" is added to the article number and a descriptive order code follows.

If several special versions are required, the suffix "-Z" is listed only once. If a requested special version is not in the catalog and can therefore not be ordered via order code, it has to be identified with Y 9 9 after consultation with us. The consultation must take place directly between your sales partner and the order processing department at Siemens. Special wiring designs can also be ordered with B99.

2

Configuration example

To help you select the correct article number for the circuit breaker type that you require, you will find two configuration examples below. Two complete circuit breakers have been configured as examples.

On the foldout page, you can enter the Article No. determined for your circuit breaker. Based on the Article No., you can request an offer from your Siemens partner.

Configuration example 1: SION 3AE5 withdrawable module (vacuum circuit breaker on withdrawable part in cartridge)**Configuration example**

SION vacuum circuit breaker

Rated voltage $U_r = 12 \text{ kV}$, 50/60 HzRated lightning impulse voltage $U_p = 75 \text{ kV}$ Rated short-circuit breaking current $I_{sc} = 25 \text{ kA}$ Rated normal current $I_n = 1250 \text{ A}$

Pole-center distance = 150 mm

Circuit breaker installation accessories	Article No.:	3	A	E	B	D	C													
Options																				
Circuit breaker for fixed mounting																				
Without circuit breaker installation accessories, circuit breaker for fixed mounting																0				
Circuit breaker prepared for separate mounting of withdrawable part																	2	- Z M 2 2		
Without withdrawable part, with contact arms, contacts ¹⁾ , wiring of withdrawable part (loose delivery)																	3	- Z M 2 3		
Without withdrawable part, with contact arms, contacts ¹⁾ , fixed contacts, bushings, wiring of withdrawable part (supplied loose)																				
Circuit breaker on withdrawable part																1				
On withdrawable part																2				
On withdrawable part, with contact arms, contacts ¹⁾																3				
On withdrawable part, with contact arms, contacts ¹⁾ , fixed contacts, bushings																				
Withdrawable module																5				
Circuit breaker on withdrawable part, with cartridge, contact arms, contacts ¹⁾ , fixed contacts, bushings, shutters																				
Circuit breaker on withdrawable part, with cartridge, contact arms, contacts ¹⁾ , fixed contacts, bushings, shutters, earthing switch with short-circuit making capacity																6				

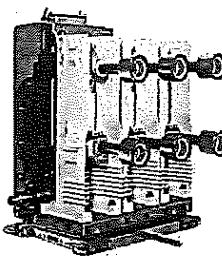

1) Special version: Contact with 13 contact fingers
(only up to 1250 A and 31.5 kA) can be ordered with order code Z-M13

Not for 3AE5

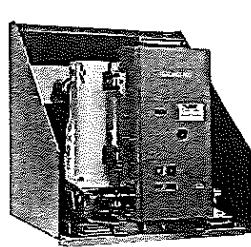

Example: Circuit breaker for fixed mounting

RIG1-375.tif

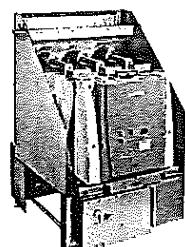

Example: Circuit breaker on withdrawable part with contact arms and contacts

RIG1-375.tif

Example: Circuit breaker with withdrawable module

RIG1-376.tif

Example: Circuit breaker with withdrawable module and earthing switch

RIG1-376.tif

1) Does not apply to a rated short-circuit breaking current of 40 kA

2) The AC frequency 50 or 60 Hz is selected at the 16th position of the article number together with the language (see page 40)

15th position

Interlocking, auxiliary switch, circuit breaker tripping signal and low-voltage interface

Mechanical interlocking	Auxiliary switch	Low-voltage interface
6 NO + 6 NC	12 NO + 12 NC	27-pole terminal strip 1 (for 3AE1) 20-pole connector strip (for 3AE5)

If 0 – 6 is selected at the 13th position, circuit breaker/withdrawable module

Position: 1 2 3 4 5 6 7 - 8 9 10 11 12 - 13 14 15 16 Order codes
 Article No.: **B A S**

See page 4-1

Not for 3AE5

0 - only for circuit-breaker in fixed-mounted design (if 0 at 13th position)

Same as for N, but with 9 NO + 9 NC

2

16th position

Languages of operating instructions and rating plate; AC frequency of operating voltages¹⁾

Operating instructions and special labels for USA		<input type="checkbox"/>		<input type="checkbox"/>	- Z Y 4 0															
Other not listed special design (only after consultation with Order Processing at Switchgear Factory Berlin). Specifications additionally in clear text		<input type="checkbox"/>		<input type="checkbox"/>	- Z Y 9 9															

1) AC voltage refers to the secondary side and not to the primary part of the circuit breaker

109

Ordering information for accessories and spare parts

The article numbers in the spare part overviews are valid for currently manufactured vacuum circuit breakers. When mounting parts or spare parts are being ordered for an existing vacuum circuit breaker, always quote the type designation, serial number and the year of manufacture of the circuit breaker to be sure to get the correct parts.

Retrofitting

When releases /solenoids are retrofitted, the article numbers of the mounting parts must also be specified.

For other additional equipment, the required mounting parts are included in the scope of supply.

Spare parts may only be replaced by qualified personnel.

Accessories for the plug connector

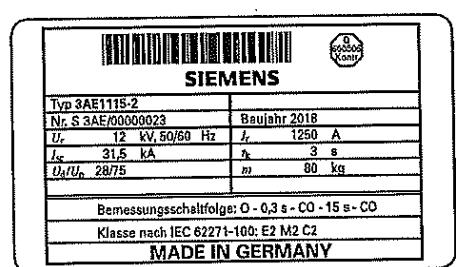

Included in the scope of supply of the basic equipment for 3AE vacuum circuit breakers:

For 24-pole plug connector

- Lower part of plug
- Crimp sockets according to number of contacts
- Upper part of plug with screwed contacts
(no crimp sockets required)

For 64-pole plug connector

- Lower part of plug
- Upper part of plug
- Crimp sockets according to number of contacts

Rating plate

2

Note:

The following 3 details are necessary for any query regarding spare parts, subsequent deliveries, etc.:

- Type designation
- Serial No.
- Year of manufacture

SION Vacuum Circuit Breakers 3AE5 and 3AE1

Designation	Description	Feature	Article No.
Closing solenoid (continued)	For 3AE5	24 – 32 V DC	3AY14 10-OB
	For 3AE5	48 V DC	3AY14 10-OC
	For 3AE5	60 V DC	3AY14 10-OD
	For 3AE5	110 – 127 V DC	3AY14 10-DE
	For 3AE5	220 – 240 V DC	3AY14 10-OF
	For 3AE5	100/125 V AC, 50/60 Hz	3AY14 10-OJ
	For 3AE5	230/240 V AC, 50/60 Hz	3AY14 10-OK
2nd and 3rd Shunt release	For 3AE1 and 3AE5	24 – 32 V DC	3AX11 01-2B
	For 3AE1 and 3AE5	48 – 60 V DC	3AX11 01-2C
	For 3AE1 and 3AE5	110 – 127 V DC	3AX11 01-2E
	For 3AE1 and 3AE5	220 – 240 V DC	3AX11 01-2F
	For 3AE1 and 3AE5	100 – 125 V AC, 50 Hz	3AX11 01-2G
	For 3AE1 and 3AE5	230 – 240 V AC, 50 Hz	3AX11 01-2I
	For 3AE1 and 3AE5	100 – 125 V AC, 60 Hz	3AX11 01-3G
	For 3AE1 and 3AE5	230 – 240 V AC, 60 Hz	3AX11 01-3J
Current-transformer- operated release	For rated normal current 0.5 A	For 3AE1 and 3AE5	3AX11 02-2A
	For rated normal current 1 A	For 3AE1 and 3AE5	3AX11 02-2B
	For tripping impulse $\geq 0.1 \text{ Ws}$, 20Ω for 7SJ45 protection relay	For 3AE1 and 3AE5	3AX11 04-2B
	For rated normal current 5 A incl. rectifier	For 3AE1	3AX14 02-2D
	For rated normal current 5 A incl. rectifier	For 3AE5	3AX14 02-2E
Mounting parts	For 2nd shunt release / c.t.-operated release	for 3AE1	3AX14 11-2A
		For 3AE5	3AX14 11-5A
	For 2nd and 3rd release	for 3AE5	3AX14 11-5B
Undervoltage release	For 3AE1 and 3AE5	24 V DC	3AX11 03-2B
	For 3AE1 and 3AE5	30/32 V DC	3AX11 03-2L
	For 3AE1 and 3AE5	48 V DC	3AX11 03-2C
	For 3AE1 and 3AE5	60 V DC	3AX11 03-2D
	For 3AE1 and 3AE5	110 V DC	3AX11 03-2E

page 791) The mass of the fixed-mounted circuit breaker, fitted
on the withdrawable part, increases by the values
specified in the dimension drawing of the withdraw-
able part (page 83)

3

Technical data

Electrical data, dimensions and masses for 3AE1

**Operating cycle diagrams for 7.2 kV**

The permissible number of electrical operating cycles is shown as a function of the breaking current (r.m.s. value). All SION vacuum circuit breakers fulfill the endurance classes E2, M2 and C2 according to IEC 62271-100.
The curve shape beyond the parameters defined in IEC 62271-100 is based on average usage data. The number of operating cycles that can actually be reached can be different depending on the respective application.

Technical data

Electrical data, dimensions and masses for 3AE5 and 3AE1

**Operating cycle diagrams for 12 kV**

The permissible number of electrical operating cycles is shown as a function of the breaking current (r.m.s. value). All SION vacuum circuit breakers fulfill the endurance classes E2, M2 and C2 according to IEC 62271-100.
The curve shape beyond the parameters defined in IEC 62271-100 is based on average usage data. The number of operating cycles that can actually be reached can be different depending on the respective application.

■ Standard information on rating plate

1) The mass of the fixed-mounted circuit breaker, fitted on the withdrawable part, increases by the values specified in the dimension drawing of the withdrawable part (page 83)

Operating cycle diagrams for 17.5 kV

The permissible number of electrical operating cycles is shown as a function of the breaking current (r.m.s. value). All SION vacuum circuit breakers fulfill the endurance classes E2, M2 and C2 according to IEC 62271-100. The curve shape beyond the parameters defined in IEC 62271-100 is based on average usage data. The number of operating cycles that can actually be reached can be different depending on the respective application.

■ Standard information on rating plate

1) The mass of the fixed-mounted circuit breaker, fitted on the withdrawable part, increases by the values specified in the dimension drawing of the withdrawable part (page 83)

Operating cycle diagrams for 24 kV

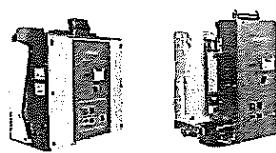

The permissible number of electrical operating cycles is shown as a function of the breaking current (r.m.s. value). All SION vacuum circuit breakers fulfill the endurance classes E2, M2 and C2 according to IEC 62271-100.

The curve shape beyond the parameters defined in IEC 62271-100 is based on average usage data. The number of operating cycles that can actually be reached can be different depending on the respective application.

SION Vacuum Circuit Breakers 3AE5 and 3AE1

SION Vacuum Circuit Breakers 3AE5 and 3AE1

Operating times and internal times, short-circuit protection of motors, consumption data of the releases

Technical data

Operating times and internal times for 3AE5

Operating times at rated voltage of the secondary circuit	Equipment of circuit breaker	Circuit breaker operating time
Closing time	—	≤ 60 ms
Opening time	1st shunt release	≤ 30 ms
Arcing time	2nd and 3rd release	≤ 45 ms
Break time	—	< 15 ms
CLOSE /OPEN contact time	1st shunt release	≤ 45 ms
Minimum command duration	2nd and 3rd release	≤ 60 ms
Pulse time for circuit breaker tripping signal	1st shunt release	≤ 75 ms
Charging time for electrical operation	2nd and 3rd release	45 ms
Synchronism error between the poles	1st shunt release	40 ms
	2nd and 3rd release	20 ms
	1st shunt release	> 10 ms
	2nd and 3rd release	> 6 ms
	—	< 15 s
	—	≤ 2 ms

Motor short-circuit protection (fuse protection of drive motors) for 3AE5

Rated voltage of the motor	Operating voltage	Power consumption of the motor	Smallest possible rated current ¹⁾ of the miniature circuit breaker with C-characteristic
V	max. V	min. V	A
24 DC	26	20	140
48 DC	53	41	140
60 DC	66	51	150
110 DC	121	93	280
220 DC	242	187	260
110 AC	121	93	280
230 AC	244	187	260

1) The inrush current in the drive motor can be neglected due to its very short presence.

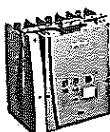

Consumption data of releases for 3AE5

Release	Power consumption		Tripping ranges	
	Operation at		Tripping voltage	Tripping voltage or tripping current
	DC approx. W	AC 50/60 Hz approx. VA	at DC	at AC 50/60 Hz
Closing solenoid 3AY14 10	300 – 370	300 – 370	85 to 110 % U	85 to 110 % U
1st shunt release (without stored-energy mechanism) 3AY14 10	300	300	70 to 110 % U	85 to 110 % U
2nd and 3rd shunt release (with stored-energy mechanism) 3AX11 01	70	50	70 to 110 % U	85 to 110 % U
Undervoltage release 3AX11 03	20	20	35 to 0 % U	35 to 0 % U
Current-transformer-operated release 3AX (rated normal current 0.5 A, 1 A or 5 A)	—	10 ²⁾	—	90 to 110 % I _a
Current-transformer-operated release 3AX11 04 (tripping pulse ≥ 0.1 Ws)	—	—	—	—

2) Consumption at pickup current (90 % of the rated normal current) and open armature.

Technical data

Operating times and internal times, short-circuit protection of motors, consumption data of the releases

**Operating times and internal times for 3AE1**

Operating times at rated voltage of the secondary circuit	Equipment of circuit breaker	Circuit breaker operating time
Closing time	—	< 60 ms
Opening time	1st shunt release	< 60 ms
	2nd release	< 45 ms
Arcing time	—	< 15 ms
Break time	1st shunt release	< 75 ms
	2nd release	< 60 ms
CLOSE /OPEN contact time	1st shunt release	< 75 ms
	2nd release	< 60 ms
Minimum command duration	Closing solenoid	45 ms
	1st shunt release	40 ms
	2nd release	20 ms
Pulse time for circuit breaker tripping signal	1st shunt release	> 15 ms
	2nd release	> 10 ms
Charging time for electrical operation	—	< 15 s
Synchronism error between the poles	—	≤ 2 ms

Motor short-circuit protection (fuse protection of drive motors) for 3AE1

Rated voltage of the motor	Operating voltage		Power consumption of the motor		Smallest possible rated current ¹⁾ of the miniature circuit breaker with C-characteristic
V	max. V	min. V	W/VA	W/VA	A
24 DC ²⁾	26	20	520 – 590	520 – 590	8
48 DC	53	41	470 – 600	470 – 600	6
60 DC	66	51	520 – 610	520 – 610	4
110 DC	121	93	650 – 740	650 – 740	4
220 DC	242	187	610 – 900	610 – 900	1.6
110 AC	121	93	670 – 740 VA	670 – 740 VA	2
230 AC	244	187	620 – 960 VA	620 – 960 VA	1.6

1) The inrush current in the drive motor can be neglected due to its very short presence.

2) Does not apply to a rated short-circuit breaking current of 40 kA

Consumption data of releases for 3AE1

Release	Power consumption		Tripping ranges	
	Operation at		Tripping voltage	Tripping voltage or tripping current at AC 50/60 Hz
	DC approx. W	AC 50/60 Hz approx. VA	at DC	at AC 50/60 Hz
Closing solenoid 3AY15 10	140 – 210	140 – 210	85 to 110 % U	85 to 110 % U
1st shunt release (without stored-energy mechanism) 3AY15 10	140	140	70 to 110 % U	85 to 110 % U
2nd shunt release (with stored-energy mechanism) 3AX11 01	70	50	70 to 110 % U	85 to 110 % U
Undervoltage release 3AX11 03	20	20	35 to 0 % U	35 to 0 % U
Current-transformer-operated release 3AX (rated normal current 0.5 A, 1 A or 5 A)	–	10 ²⁾	–	90 to 110 % I _a
Current-transformer-operated release 3AX11 04 (tripping pulse ≥ 0.1 Ws)	–	–	–	–

2) Consumption at pickup current (90 % of the rated normal current) and open armature.

Application and other requirements

Please check off _____ Please fill in

You prefer to configure your SION vacuum circuit breaker on your own?
 Please follow the steps for configuration and enter the article number in the configuration aid.

Instruction for configuration of the SION vacuum circuit breaker

1st step: Definition of the circuit breaker and equipment package (see pages 18 to 34)

Please specify the following ratings:	Possible options:
Rated voltage (U_r)	U_r : 7.2 kV to 24 kV
Rated lightning impulse voltage (U_p)	U_p : 60 kV to 125 kV
Rated short-duration power-frequency withstand voltage (U_d)	U_d : 20 kV, 28 kV, 32 kV, 42 kV, 55 kV, 65 kV
Rated short-circuit breaking current (I_{sc})	I_{sc} : 16 kA to 40 kA
Rated normal current (I_r)	I_r : 800 A to 3150 A
Pole-center distance	150 mm to 275 mm
Width across flats	205 mm to 310 mm

These ratings define the positions 5 to 8 of the article number.

2nd step: Definition of the secondary equipment (see pages 35 to 40)

Please specify the following equipment features:	Possible options:
Release combination (position 9)	Shunt release, current-transformer-operated release and undervoltage release
Closing solenoid (position 10)	Operating voltages from 24 V DC to 240 V AC
Operating voltage of the releases (positions 11/12)	Operating voltages from 24 V DC to 240 V AC
Installation accessories (position 13)	Fixed mounting, with withdrawable part, with contact, fixed contact, bushing, cartridge, with/without earthing switch
Drive motor (position 14)	Operating voltages from 24 V DC to 240 V AC
Number of auxiliary contacts (position 15)	6 NO + 6 NC, 12 NO + 12 NC
Design of the secondary connection (position 15)	20-pole plug connector or 27-pole terminal strip, 24-pole plug, 64-pole plug
Mechanical interlocking, circuit breaker tripping signal (position 15)	With or without
Language of the documentation (position 16)	English, German, French, Spanish, Russian, further languages on request
Frequency of the operating voltage of the secondary equipment at AC (position 16)	DC or AC 50 Hz; 60 Hz

These equipment features define the positions 9 to 16 of the article number.

3rd step: Do you have any further requirements concerning the equipment? (Please refer to page 41)
 Your Siemens sales partner will be pleased to support you.

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

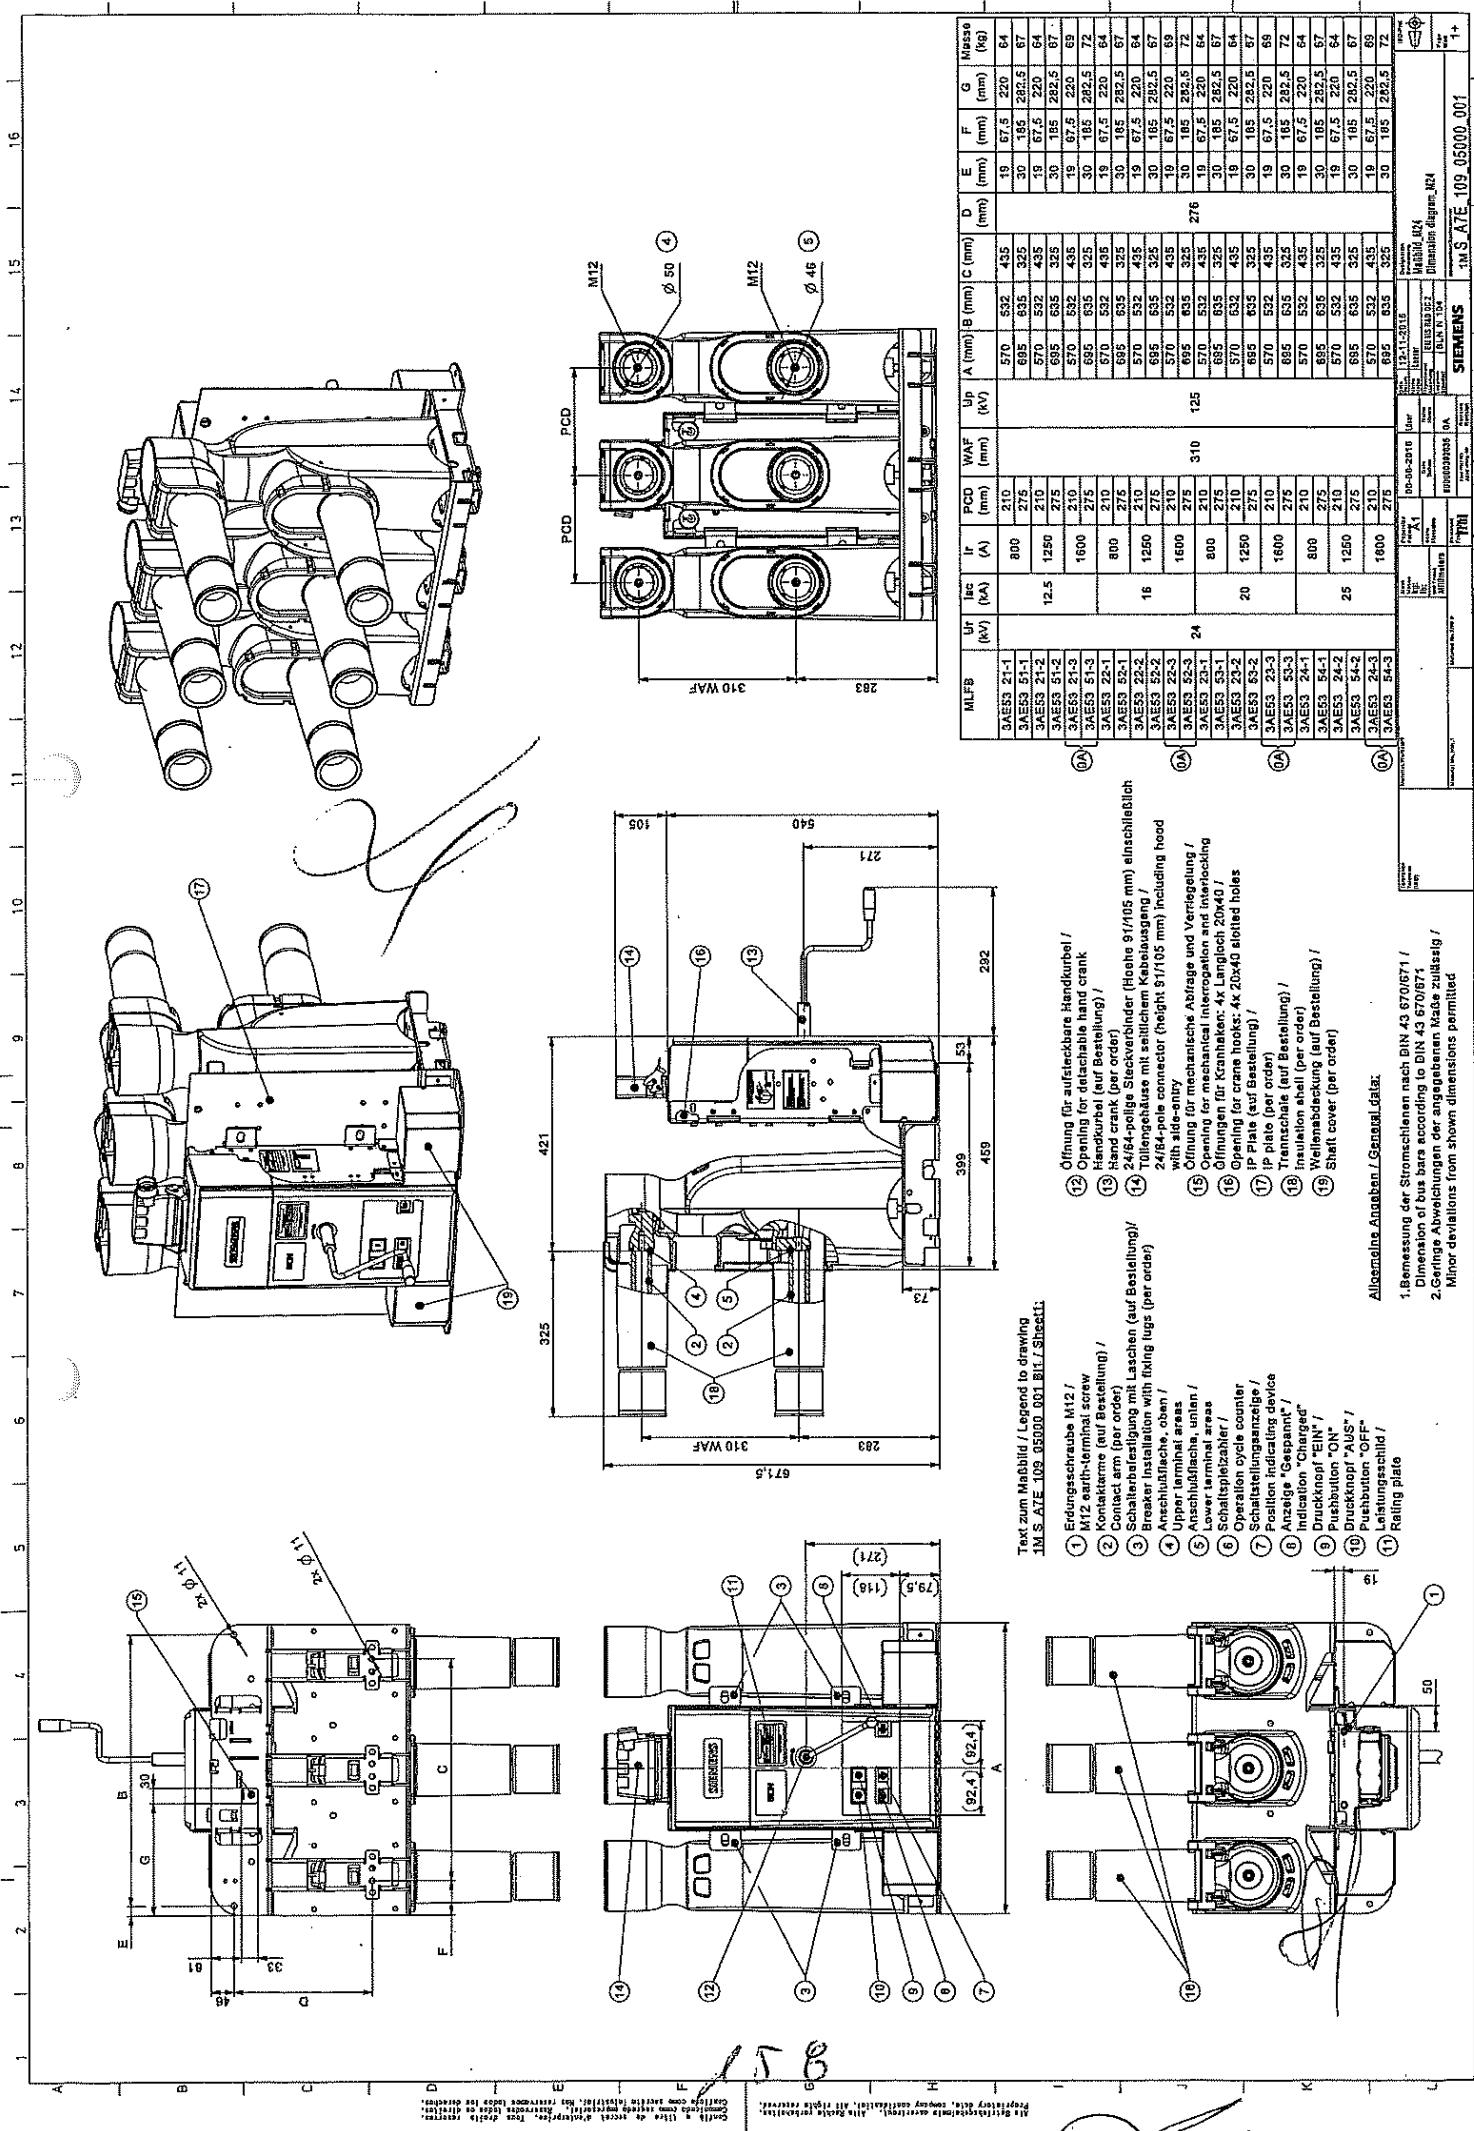

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit
<https://www.siemens.com/industrialsecurity>.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under
<https://www.siemens.com/industrialsecurity>.

Prüffeld der Schaltwerke

Test Document

Report No.: 15-085-ME

Copy No.: 0

Contents: 20 Sheets

Test object: Three-pole air insulated withdrawable module with three-pole vacuum circuit-breaker

Designation: 3AX7111-5 with 3AE5324-2 with vacuum interrupters VSS12-1-31-A5

Rated voltage: 24 kV Rated normal current: 1250 A Rated frequency: 50 Hz
Rated short-circuit breaking current: 25 kA

Manufacturer: Siemens AG, EM MS O SD BLN MF, Berlin

Client: Siemens AG, EM MS R&D OC, Berlin

Testing station: Prüffeld der Schaltwerke, Berlin

Date of test: October 22 - 23, 2015

Applied test specifications:

IEC 62271-1, Edition 1.1, 2011-08

IEC 62271-100, Edition 2.1, 2012-09

IEC 62271-200, Edition 2.0, 2011-10

Tests performed:

Temperature-rise test with 1250 A at 50 Hz

Test results:

The test object has passed the tests stated above without any objection. The results obtained and the performances proved of the test object comply with the requirements of the specifications mentioned above.

Berlin, February 08, 2016

На основание чл.36а ал.3 от ЗОП

The test results relate only to the items tested.

The authenticity of this document is guaranteed by the intactness of the seal label and seal ribbon.
Without a written permission of Prüffeld der Schaltwerke it is not allowed to make reproduction in
extracts of this document. Copying the cover sheet accompanied by sheet 2 is an exception.

Prüffeld der Schaltwerke

Report No.: 15-085-ME

Sheet: 2

Notes

1. The testing station of the Siemens switchgear factory (Prüffeld der Schaltwerke), Siemens AG, Berlin, has been approved by the DAkkS (German accreditation body) for rendering the following testing services:

- mechanical tests,
- temperature rise tests,
- environment tests,
- dielectric tests and
- power tests (e.g. switching capacity, load switching, short-time current tests, etc.)

on high-voltage switchgear and controlgear and on power engineering equipment.

The approval was given under registration no. D-PL-11055-10. Testing services beyond the scope certified cannot be regarded as testing services of an approved testing station. No test documents will be made out for them.

2. In the Prüffeld der Schaltwerke, Siemens AG, Berlin, all tests will be carried out according to EN ISO/IEC 17025 and the pertinent international and national test specifications. Moreover, all criteria specified by the accreditation authority will be taken into account in the tests.
3. The Prüffeld der Schaltwerke, Siemens AG, Berlin, points out that its accreditation or its test documents do not imply that the accreditation authority or another authority have acknowledged the product tested.
4. Test documents or parts thereof may not be used or released by the purchaser for advertising purposes if the accreditation authority considers their use as misleading. Reproduction in extracts of the test documents is acceptable only on condition of the prior consent of the Prüffeld der Schaltwerke, Siemens AG, Berlin. Copying the cover sheet and sheet 2 is an exception. If test documents or extracts thereof are to be used for advertising purpose or publication, the agreement of the Prüffeld der Schaltwerke, Siemens AG, Berlin, must be obtained in due time before utilization. If necessary, the Prüffeld der Schaltwerke, Siemens AG, Berlin, will obtain the accreditation authority's consent.
5. If reference is to be made in one way or other to the utilization of the Prüffeld der Schaltwerke, Siemens AG, Berlin, as approved testing laboratory, this shall be worded as follows:
"Testing by the Testing Station of Siemens Schaltwerke Berlin, which is accredited by the DAkkS (German accreditation body) for tests on high-voltage switchgear and controlgear and power engineering equipment under registration No. D-PL-11055-10".
6. The Prüffeld der Schaltwerke applies the internal procedure PSW-IA 020 for determining the uncertainties of measurement. As long as no explicit statements are made, the uncertainties required by the relevant standards have been complied with.
7. The Prüffeld der Schaltwerke is an independent Test Laboratory in accordance with the standard EN ISO/IEC 17025. During testing and evaluation the head of the Laboratory and the personnel are released from orders of the upper management and accordingly there is no possibility for external influence of the Laboratory, whether commercial or otherwise.

Different type of documents

A Type Test Certificate...

is issued for type tests which have successfully been carried out in full compliance with the relevant specifications or standards valid at the time of the test. For these tests the equipment under test must be clearly identified by technical description, drawings and additional specifications.

A Test Document...

is issued for parts of type tests which have successfully been carried out in full compliance with the relevant specifications or standards valid at the time of test. For these tests the equipment under test must be clearly identified by technical description, drawings and additional specifications.

A Test Report...

is issued for all other tests which have been carried out according to specifications, standards and/or clients instructions. Similarly, this test report contains all test results, details of the conditions under which the tests were carried out, also details relating to the behaviour of the equipment during test, and its condition after the tests.

A Test Confirmation...

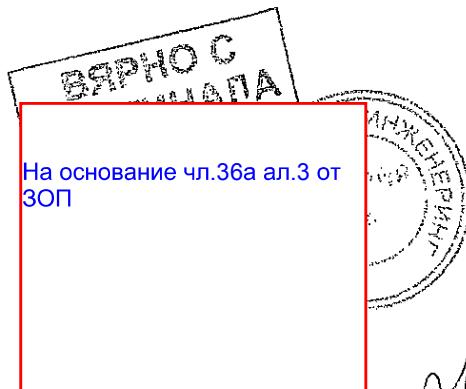

is issued immediately after the tests. It confirms that the tests have been conducted and is valid only until publishing the detailed results in an entire document.

Technical Data of Test Object Withdrawable Module

Test object: Three-pole air insulated withdrawable module
Designation: 3AX7111-5
Manufacturer: Siemens AG, EM MS O SD BLN MF, Berlin
Serial No.: Withdrawable part and withdrawable cartridge: 3AE5R/00005721
Year of manufacture: 2015
Drawing No.: Drawings and part lists - see sheet 7

Ratings assigned by the manufacturer:

Rated voltage	24 kV
Rated normal current	1250 A
Rated frequency	50/60 Hz
Rated lightning impulse withstand voltage	125 kV
Rated switching impulse withstand voltage	- kV
Rated power-frequency withstand voltage	65 kV
Rated peak withstand current	65 kA
Rated short-time withstand current	25 kA
Rated duration of short-circuit	3 s
Insulating medium	air
Rated filling pressure for insulation	- MPa abs. at 20 °C
Minimum functional pressure for insulation	- MPa abs. at 20 °C

Further data:

Pole centre distance 210 mm
Width across flats 310 mm

Essential characteristics:

Technical Data of Test Object Circuit-Breaker

Test object: Three-pole vacuum circuit-breaker
Designation: 3AE5324-2 with vacuum interrupters VSS 12-1-31-A5
Manufacturer: Siemens AG, EM MS O SD BLN MF, Berlin
Serial No.: S 3AE5/00005721
Year of manufacture: 2015
Drawing No.: Drawings and parts lists - see sheet 8 and 9

Ratings assigned by the manufacturer:

Rated voltage	24 kV
Rated normal current	1250 A
Rated frequency	50/60 Hz
Rated lightning impulse withstand voltage	125 kV
Rated switching impulse withstand voltage	- kV
Rated power-frequency withstand voltage	65 kV
Rated peak withstand current	65 kA
Rated short-time withstand current	25 kA
Rated duration of short-circuit	3 s
Rated short-circuit breaking current	25 kA
DC component of the rated short-circuit breaking current (Valid for a minimum opening time of XX ms, a relay-time of 10 ms and a time constant of 45 ms)	50 %
Rated short-circuit making current	65 kA
Rated transient recovery voltage	41.2 kV
Rate of rise of transient recovery voltage	0.47 kV/μs
First-pole-to-clear factor	1.5
Rated operating sequence	O - 0.3 s - CO - 15 s - CO
Arc extinguishing medium	Vacuum
Rated filling pressure for interruption	- MPa abs. at 20 °C
Minimum functional pressure for interruption	- MPa abs. at 20 °C
Insulating medium	Air
Rated filling pressure for insulation	- MPa abs. at 20 °C
Minimum functional pressure for insulation	- MPa abs. at 20 °C
Driving mechanism (type)	Spring, charged by motor
Number of poles	3
Number of units per pole	1
Rated opening time	< 60 ms
Rated closing time	< 60 ms
Rated supply voltage of opening device	110 V
Rated supply voltage of closing device	110 V
Rated supply voltage of auxiliary circuits	110 V
Rated frequency of supply voltage	- Hz
Rated line/cable-charging breaking current	10 / 31,5 A
Rated single capacitor bank breaking current	400 A
Classification of circuit-breaker	Class M2, E2, C2, S1

Documents and Addresses

Accreditation

The Prüffeld der Schaltwerke, Berlin has been approved by the DAkkS (German accreditation body) according to EN ISO/IEC 17025 for tests in the field of high-voltage switchgear and controlgear and power engineering equipment (Registration-No D-PL-11055-10-01).

Under reference to EN ISO/IEC 17025 the Prüffeld der Schaltwerke states the following:

- The accreditation of the Prüffeld der Schaltwerke or any of its test reports by themselves in no way constitute or imply product approval by DAkkS or any other body.
- If someone refers to a test in an accredited Prüffeld der Schaltwerke this reference shall include the accreditation body, i.e. DAkkS, the relevant scope of the accreditation and the appropriate registration number.

PSW-Documents

A Certificate

is issued for type tests which have successfully been carried out in full compliance with the relevant specifications or standards valid at the time of the test. For these tests the equipment under test must be clearly identified by technical description, drawings and additional specifications.

A Test Document

is issued for parts of type tests which have successfully been carried out in full compliance with the relevant specifications or standards valid at the time of test. For these tests the equipment under test must be clearly identified by technical description, drawings and additional specifications.

A Test Report

is issued for all other tests which have been carried out according to specifications, standards and/or clients instructions. Similarly, this test report contains all test results, details of the conditions under which the tests were carried out, also details relating to the behaviour of the equipment during test, and its condition after the tests.

A Test Confirmation

is issued immediately after the tests. It confirms that the tests have been conducted and is valid only until publishing the detailed results in an entire document.

A Test Document

is issued for parts of type tests which have successfully been carried out in full compliance with the relevant specifications or standards valid at the time of test. For these tests the equipment under test must be clearly identified by technical description, drawings and additional specifications.

A Test Report

is issued for all other tests which have been carried out according to specifications, standards and/or clients instructions. Similarly, this test report contains all test results, details of the conditions under which the tests were carried out, also details relating to the behaviour of the equipment during test, and its condition after the tests.

A Test Confirmation

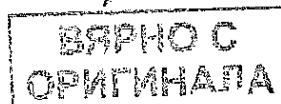

is issued immediately after the tests. It confirms that the tests have been conducted and is valid only until publishing the detailed results in an entire document.

Report No.: 15-054-MS-2

Sheet: 5

Technical Data of Test Object Circuit-Breaker

Test object: Three-pole vacuum circuit-breaker
Designation: 3AE5324-2 with vacuum interrupters VSS12-1-31-A5
Manufacturer: Siemens AG, EM MS O SD BLN MF, Berlin
Serial No.: S 3AE5/00004949
Year of manufacture: 2015
Drawing No.: Drawings and parts lists - see sheet 6

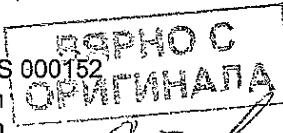

Ratings assigned by the manufacturer:

Rated voltage	24 kV
Rated normal current	1250 A
Rated frequency	50/60 Hz
Rated lightning impulse withstand voltage	125 kV
Rated switching impulse withstand voltage	- kV
Rated power-frequency withstand voltage	65 kV
Rated peak withstand current	65 kA
Rated short-time withstand current	25 kA
Rated duration of short-circuit	3 s
Rated short-circuit breaking current	25 kA
DC component of the rated short-circuit breaking current (Valid for a minimum opening time of 21 ms, a relay-time of 10 ms and a time constant of 45 ms)	50 %
Rated short-circuit making current	65 kA
Rated transient recovery voltage	41.2 kV
Rate of rise of transient recovery voltage	0.47 kV/μs
First-pole-to-clear factor	1.5
Rated operating sequence	O - 0.3 s - CO - 15 s - CO
Arc extinguishing medium	Vacuum
Rated filling pressure for interruption	- MPa abs. at 20 °C
Minimum functional pressure for interruption	- MPa abs. at 20 °C
Insulating medium	Air
Rated filling pressure for insulation	- MPa abs. at 20 °C
Minimum functional pressure for insulation	- MPa abs. at 20 °C
Driving mechanism (type)	Spring, charged by motor
Number of poles	3
Number of units per pole	1
Rated opening time	< 60 ms
Rated closing time	< 60 ms
Rated supply voltage of opening device	110 V d.c.
Rated supply voltage of closing device	110 V d.c.
Rated supply voltage of auxiliary circuits	110 V d.c.
Rated frequency of supply voltage	- Hz
Rated line /cable-charging breaking current	10 / 31.5 A
Rated single capacitor bank breaking current	400 A
Classification of circuit-breaker	Class M2, E2, C2, S1

Further data:

Serial number of vacuum interrupter in pole L1 / L2 / L3

Test object: Three-pole vacuum circuit-breaker

Designation: 3AE5324-2 with vacuum interrupters VSS12-1-31-A5

Rated voltage: 24 kV Rated normal current: 1250 A

Rated short-circuit breaking current: 25 kA

Rated frequency: 50/60 Hz

Manufacturer: Siemens AG, EM MS O SD BLN MF, Berlin

Client: Siemens AG, EM MS R&D OC, Berlin

Testing station: Prüffeld der Schaltwerke, Berlin

Date of test: August 18 - 20, 2015

Applied test specifications:

IEC 62271-1, Edition 1.1, 2011-08

IEC 62271-100, Edition 2.1, 2012-09

Tests performed:

Short-circuit tests for a rated current of 25 kA at a rated voltage of 24 kV and a rated frequency of 50 Hz in test-duty:

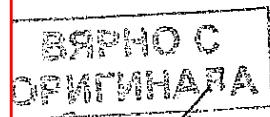

STC: Short-time withstand current: 25 kA - 3 s; peak withstand current: 65 kA

Test results:

The test object has passed the above indicated tests without any objection. The proved performance and the results obtained comply with the requirements mentioned above.

Documents and Addresses

Accreditation

The Prüffeld der Schaltwerke, Berlin has been approved by the DAkkS (German accreditation body) according to EN ISO/IEC 17025 for tests in the field of high-voltage switchgear and controlgear and power engineering equipment (Registration-No D-PL-11055-10-01).

Under reference to EN ISO/IEC 17025 the Prüffeld der Schaltwerke states the following:

- The accreditation of the Prüffeld der Schaltwerke or any of its test reports by themselves in no way constitute or imply product approval by DAkkS or any other body.
- If someone refers to a test in an accredited Prüffeld der Schaltwerke this reference shall include the accreditation body, i.e. DAkkS, the relevant scope of the accreditation and the appropriate registration number.

Test Document

Report No.: 15-075-ME

Copy No.: 0

Contents: 18 Sheets

Test object: Three-pole vacuum circuit-breaker

Designation: 3AE5324-2 with vacuum interrupters VSA 12-1-31 A5

Rated voltage: 24 kV Rated normal current: 1250 A

Rated short-circuit breaking current: 25 kA

Manufacturer: Siemens AG, EM MS O SD BLN MF, Berlin

Client: Siemens AG, EM MS R&D OC 4 2, Berlin

Testing station: Prüffeld der Schaltwerke, Berlin

Date of test: August 26th - September 01th, 2015

Rated frequency: 50/60 Hz

Applied test specifications:

IEC 62271-1, Edition 1.1, 2011-08

DIN EN 62271-1/A1 (VDE 0671-1/A1), 2012-04

IEC 62271-100, Edition 2.1, 2012-09

DIN EN 62271-100 (VDE 0671-100), 2013-08

Tests performed:

Temperature-rise test with 1250 A at 50 Hz

(Terminal connection: copper bar, painted, 60mm x 10mm)

Test results:

The test object has passed the above indicated tests without any objection. The proved performance and the results obtained comply with the requirements mentioned above.

На основание чл.36а ал.3 от ЗОП

Berlin, November 05, 2015

The test results relate only to the items tested.

The authenticity of this document is guaranteed by the integrity of the seal label and seal ribbon. Without a written permission of Prüffeld der Schaltwerke it is not allowed to make reproduction in extracts of this document. Copying the cover sheet accompanied by sheet 2 and the sheets mentioned here is an exception.

Prüffeld der Schaltwerke, Berlin

Report No.: 15-075-ME

Sheet: 2

Documents and Addresses

Accreditation

The Prüffeld der Schaltwerke, Berlin has been approved by the DAkkS (German accreditation body) according to EN ISO/IEC 17025 for tests in the field of high-voltage switchgear and controlgear and power engineering equipment (Registration-No D-PL-11055-10-01).

Under reference to EN ISO/IEC 17025 the Prüffeld der Schaltwerke states the following:

- The accreditation of the Prüffeld der Schaltwerke or any of its test reports by themselves in no way constitute or imply product approval by DAkkS or any other body.
- If someone refers to a test in an accredited Prüffeld der Schaltwerke this reference shall include the accreditation body, i.e. DAkkS, the relevant scope of the accreditation and the appropriate registration number.

PSW-Documents

A Type Test Certificate

is issued for type tests which have successfully been carried out in full compliance with the relevant specifications or standards valid at the time of the test. For these tests the equipment under test must be clearly identified by technical description, drawings and additional specifications.

A Test Document

is issued for parts of type tests which have successfully been carried out in full compliance with the relevant specifications or standards valid at the time of test. For these tests the equipment under test must be clearly identified by technical description, drawings and additional specifications.

A Test Report

is issued for all other tests which have been carried out according to specifications, standards and/or clients instructions. Similarly, this test report contains all test results, details of the conditions under which the tests were carried out, also details relating to the behaviour of the equipment during test, and its condition after the tests.

A Test Confirmation

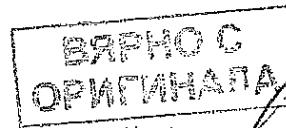

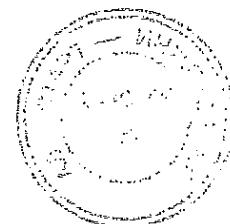

is issued immediately after the tests. It confirms that the tests have been conducted and is valid only until publishing the detailed results in an entire document.

Тестов документ
за вакуумен мощностен прекъсвач ЗАЕ5353-1
(24kV, 20kA, 800A)

Ако се провежда изпитване с вакуумен прекъсвач с различен поръчков номер,
валидността на документа за изпитване се дава чрез следните изявления:

Изброените тестови документи за посочения вакуумен прекъсвач са валидни
поради сходен дизайн на вакуумните прекъсвачи и предвид, че конструкцията на
пътя на основния ток и механичният задвижващ механизъм са почти еднакви.

**Summary of type tests
for Vacuum Circuit-Breaker
3AE5353-1
(24 kV, 20 kA, 800 A)**

The vacuum circuit-breakers of type 3AE5 were type tested in accordance with

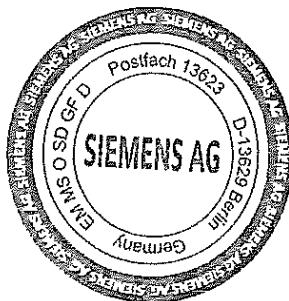

IEC Publication 62271-1, Edition 1.1, 2011-08,
IEC Publication 62271-100, Edition 2.1, 2012-09 and the relevant harmonisation
documents.

For vacuum circuit-breaker 3AE5353-1 the following test documents are valid:

Type Tests	Rated Values	Test Documents
Dielectric tests	$U_p = 125 \text{ kV}$ $U_d = 50 \text{ kV}$	15-070-MH
Temperature-rise tests	$I_r = 800 \text{ A}$	15-075-ME
Mechanical operation test at ambient temperature, Low and high temperature tests	10.000 op. Cycles -25 / 40 °C	15-073-MM 15-072-MM
Short-time withstand current and peak withstand current tests	$I_{sc} = 20 \text{ kA}/3\text{s}$ $I_{ma} = 50 \text{ kA}$	15-055-MS
Short-circuit making and breaking tests	$I_{sc} = 20 \text{ kA}$ $I_{ma} = 50 \text{ kA}$	15-054-MS-1

Summary of type tests
for Vacuum Circuit-Breaker
3AE5353-1
(24 kV, 20 kA, 800 A)

If a test is carried out with a vacuum circuit-breaker with different order number, the validity of the test document is given by the following statements:

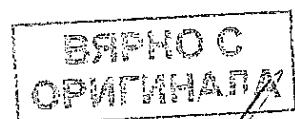

The listed test documents for the mentioned vacuum circuit-breaker are valid in respect to familiar design of the vacuum circuit-breakers, as the construction of the main current path and mechanical driving mechanism is nearly identical.

In addition to the type tests in accordance with IEC 62271-1 and IEC 62271-100 the following tests were carried out:

Type Tests	Test Documents
Single-phase and double earth fault tests	15-054-MS-1
Capacitive current switching tests: - cable-charging current breaking tests - line-charging current breaking tests - single capacitor bank switching tests.	15-065-MS
Out-of-phase making and breaking tests	16-085-MS
Electrical endurance test on class E2	15-096-MS

Confirmation of validity of design of 3AE51

We herewith confirm that three-pole Siemens vacuum circuit breaker type SION 3AE51 for Ratings up to 12 kV – 20 kA – 800 and 1250 A equipped with Siemens vacuum interrupters type VSA12-0-25 is able to interrupt 1 200 operations at short-circuit breaking current up to 5 kA or alternative 10 000 operations at load current.

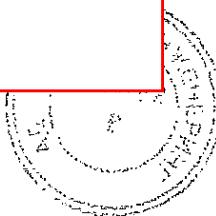

The tests were carried out based on the class E2 procedure.

ДЕКЛАРАЦИЯ

че предложеното оборудване в процедурата отговаря на минималните технически изисквания на Възложителя

Аз, долуподписаният Стоил Колев Стоилов, в качеството ми на представляващ „Старт-Инженеринг“ АД, участник в открита процедура за възлагане на обществена поръчка с реф. № PPD18-103 и предмет: “Модернизация (ретрофит) на възлови разпределителни станции 20 (10) кV и изграждане на вериги на телемеханика”,

ДЕКЛАРИРАМ ЧЕ:

1. Предложеното от нас оборудване в процедурата за позиция „Триполюсен вакуумен прекъсвач, 24 кV/630 A/20 kA, за монтиране на закрито, фиксиран“ отговаря на минималните технически изисквания на Възложителя, посочени в таблица 1.
2. Доставяните от нас материали, апаратура, оборудване и съоръжения отговарят на посочените от възложителя в документацията за участие стандарти за изпълнение на поръчката.
3. Предложените от нас материали, апаратура, оборудване и съоръжения са с технически характеристики и показатели, които съответстват на техническите характеристики и показатели, посочени от възложителя за изпълнение на поръчката в документацията за участие.

Информиран съм, че Възложителят (включително чрез неговия помощен орган, а именно назначената за провеждане на поръчката оценителна комисия) ще обработва и съхранява личните ми данни, посочени в настоящата декларация, за целите на провеждане на обществената поръчка, като за целта ще предприеме всички необходими според действащата нормативна уредба мерки за защита на личните ми данни.

Protective and Measuring Transformers – The Adaptable

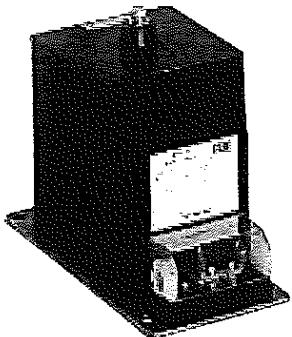

The task of instrument transformers is to transform high currents and voltages proportionally and in-phase into small current or voltage values for measuring or protection purposes. So they are used either to measure and record the transmitted power or to feed protection devices

with evaluable signals, which enable the protection device to e.g. trip a switching device depending on the situation. Furthermore, they isolate the connected measuring or protection equipment electrically from live parts of the switchgear.

1 Current transformer

Voltage transformer

Current transformers can be regarded as transformers working in short-circuit, with the full normal current flowing through their primary side. Devices connected on the secondary side are series-connected. Current transformers can have several secondary windings with magnetically separated cores of the same or different characteristics. They can, for example, be equipped with two measuring cores of different accuracy class, or with measuring and protection cores with different accuracy limit factors.

Due to the risk of overvoltages, current transformers must not be operated with open secondary terminals, but only in short circuit or with the burden of the measuring equipment.

Voltage transformers contain only one magnet core and are normally designed with one single secondary winding. If necessary, earthed (single-phase) voltage transformers are provided with an additional residual voltage winding (earth-fault winding) beside the secondary winding (measuring winding).

In contrast to current transformers, voltage transformers must never be short-circuited on the secondary side. The earth-side terminal of the primary winding is effectively earthed in the terminal box, and must not be removed in operation.

Types of construction

Protective and measuring transformers are designed in different types of construction for the multiple installation requirements and operating conditions they are subjected to. They are electrical devices which convert primary electrical values – currents or voltages – into proportional and in-phase values that are adequate for the connected devices such as measuring instruments, meters, protection relays and similar. A distinction is made here between current and voltage transformers.

The following transformer types are available for selection in this catalog:

Current transformers

- Indoor support-type current transformer in block-type design
- Indoor support-type current transformer in single-turn design (e.g. bar-primary transformer)
- Indoor bushing-type current transformer in single-turn design
- Indoor bar-primary bushing-type current transformer
- Outdoor support-type current transformer

Voltage transformers

- Earthed (single-phase) or unearthed (double-phase) indoor transformers in different sizes
- Earthed (single-phase) or unearthed (double-phase) outdoor transformers in different sizes

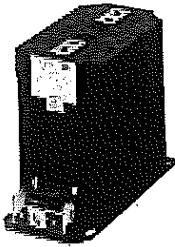

The transformers offered in the selection are only a part of the possible variations. If the transformer required is not shown, please clarify the feasibility with the responsible sales partner or the order processing department in the Switchgear Factory Berlin. The same applies to transformers according to the ANSI standard.

Approvals/Certifications

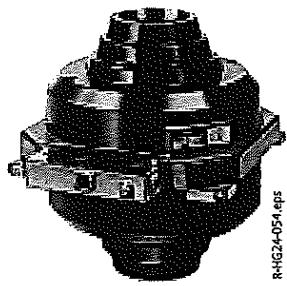

In Germany, instrument transformers may only be used for commercial purposes, such as billing metering of electricity, if they have been approved once (type approval) by the Physikalisch-Technische Bundesanstalt (PTB) (Federal Physical-Technical Institute), and if every transformer is calibrated by an officially recognised inspecting authority.

Calibration is done by a calibration office, or by the transformer manufacturer on behalf of a calibration office. The test is documented by means of a test mark as well as a calibration certificate.

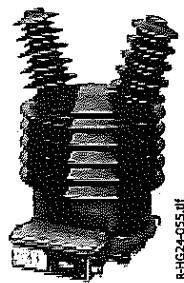

The calibration costs are charged in accordance with the official scale of fees.

Example for transformer in block-type design

Example for bushing-type transformer

Example for outdoor transformer

Current transformers

Current transformers can be regarded as transformers operating in short circuit, which carry the full rated current on the primary side. The devices on the secondary side are series-connected. They can have several secondary windings with mechanically separated cores of the same or different characteristics. Thus, current transformers can be designed e.g. with two measuring cores of different accuracy class, or with measuring or protection cores with different accuracy limit factors.

Due to the risk of overvoltages, current transformers must not be operated with open secondary terminals, but only in short circuit or with the burden of the measuring equipment.

Glossary of terms

Rated current I_N (r.m.s. value in A)

The rated primary (I_{PN}) and secondary (I_{SN}) current is the current that characterises the transformer, or the current it is designed for. Both values are given on the transformer rating plate. The rated primary current (I_{PN}) depends on the power system and is defined by the system operator.

Usual values for primary currents (in A):

10; 12.5; 15; 20; 25; 30; 40; 50; 60; 75

and their decimal multiples (preferred values are underlined).

Usual values for secondary currents: 1 and 5 A.

For technical reasons, but above all for economical reasons, 1 A is recommended as secondary current, especially if there are long measuring leads.

Rated continuous thermal current I_0 (thermal strength)

The value of the current which can be permitted to flow continuously in the primary winding, the secondary winding being connected to the rated burden, without the temperature rise exceeding the values specified.

I_0 is often equal to I_N , but it can also be defined as a multiple thereof.

Rated short-time thermal current I_{th}

The r.m.s. value of the primary current, flowing in case of short circuit, which a current transformer will withstand for 1 or 3 seconds without suffering harmful effects, the secondary winding being short-circuited.

Rated dynamic current I_{dyn}

The peak value of the primary current which a transformer will withstand, without being damaged electrically or mechanically by the resulting electromagnetic forces, the secondary winding being short-circuited.

Rated transformation ratio K_N

The ratio of the rated primary current to the rated secondary current. It is expressed as an unreduced fraction, e.g. 500 A/1 A.

Rated output S_N

The value of the apparent power (in VA at a specified power factor), for which the current transformer has to keep the accuracy class at the rated secondary current and with rated burden. Thus, the rated output describes the capacity of a current transformer to "drive" the secondary current within the error limits by means of a burden.

Current transformers can feature the following preferred rated outputs: 2.5 VA; 5 VA; 10 VA; 15 VA; 30 VA.

Rated burden Z_N

The burden is the apparent resistance of the devices connected on the secondary side (including all connection leads), for which the current transformer has to keep the stipulated class limits. The burden is normally expressed as apparent power in VA.

Current error F_i

The current error of a current transformer is (in %):

$$F_i = 100 \cdot \frac{K_N \cdot I_{sec} - I_{prim}}{I_{prim}}$$

K_N Rated transformation ratio
 I_{prim} Actual primary current
 I_{sec} Actual secondary current

Phase displacement d

The difference in phase between the primary and secondary current vectors, the direction of the vectors being so chosen that the angle is zero for a perfect transformer.

The phase displacement is said to be positive when the secondary current vector leads the primary current vector. It is usually expressed in minutes.

Limits of current error and phase displacement according to IEC 60044-1

Accuracy class	± current error in percent at rated current I_N					± phase displacement in minutes at rated current I_N				
	120 %	100 %	20 %	5 %	120 %	100 %	20 %	5 %		
Measuring current transformers										
0.2	0.2	0.2	0.35	0.75	10	10	15	30		
0.5	0.5	0.5	0.75	1.5	30	30	45	80		
1	1	1	1.5	3	60	60	90	100		
Protective current transformers										
5P	—	1	—	—	—	60	—	—		
10P	—	3	—	—	—	—	—	—		

Measuring current transformers

Current transformers provided for the connection of measuring instruments, meters and similar devices (e.g. 10 VA Cl. 0.5 FS5).

Rated instrument limit primary current

The value of the primary current at rated burden and a composite error of 10 %.

Instrument security factor n

The ratio of rated instrument limit primary current to the rated primary current

Note:

In the event of short-circuit currents flowing through the primary winding of a current transformer, the thermal stress to the measuring instruments supplied by the current transformer is smallest when the value of the rated instrument security factor is small.

Accuracy class

The limit of the percentage current error at rated current I_N (see table).

Generally, current transformers are used for a measuring range of 5 % to 120 % of the rated primary current.

Special designs**Extended current ratings**

Current transformers with ext. 200 % can be continuously operated at $2 \times I_N$, and keep the error limits of their class in the range up to 200 % of the rated primary current.

Protective current transformers

Current transformers intended to supply protection relays (e.g. 15 VA Cl. 10 P 10).

Accuracy class (identification P)

The limit of the percentage current error for the rated accuracy limit primary current.

Rated accuracy limit primary current

The value of primary current up to which the transformer will comply with the requirements for composite error.

Accuracy limit factor

The ratio of the rated accuracy limit primary current to the rated primary current.

Multi-ratio current transformers

If the ratio of current transformers has to be variable, e.g. for planned switchgear extensions, it is possible to use multi-ratio current transformers.

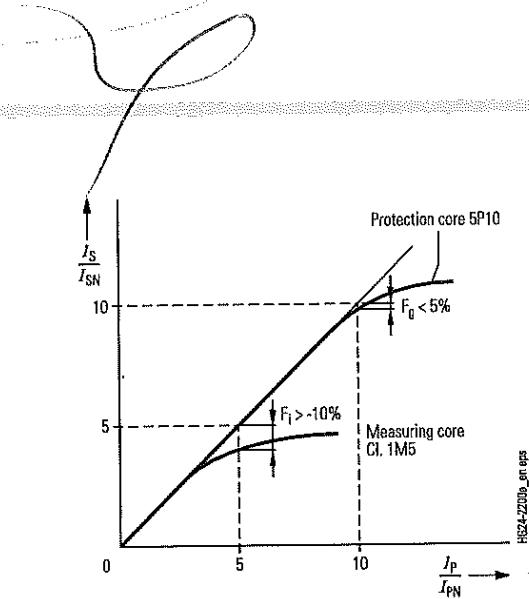

Primary multi-ratio

Only possible for wound-primary transformers (transformers with several primary turns) with a ratio of 1:2 (e.g. 2 x 600 A/1 A). Reconnection is made by re-arrangement of copper lugs in the primary connection area. Ratings, instrument security factors as well as the secondary internal resistance remain constant during reconnection.

Secondary multi-ratio

In single-turn and wound-primary transformers, this can be implemented by taps of the secondary windings (e.g. 2000–1000 A/1 A).

Ratings or instrument security factors change almost linearly with the ratio. If not stated otherwise, the specified rated data is always referred to the lower current value.

Overcurrent performance of current transformers when loaded with rated burden

F_i Current error
 F_g Composite error

Performance in the event of overcurrent

In the event of an overcurrent, the rated secondary current increases proportionally with the rated primary current up to the rated instrument limit primary current.

The ratio of the rated instrument limit primary current to the rated primary current provides the instrument security factor assigned to the core. In accordance with this factor, the rated instrument limit primary current is subjected to specific error limits.

The measuring and protection cores place different demands on these error limits.

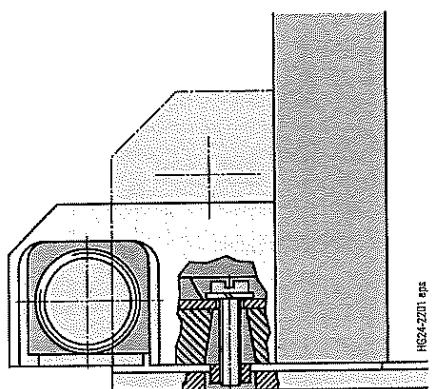

For measuring cores, the current error F_i is $> -10\%$ in order to protect the supplied measuring devices, meters, etc. safely in case of overcurrent.

In protection cores, the composite error F_g is max. 5 % (5P) or 10 % (10P) in order to ensure the desired protection tripping.

The specified limits are only fulfilled at the rated burden of the transformer. If the operating burden differs from the rated burden of the transformer, the instrument security factor changes as follows:

$$n' = n \cdot \frac{Z_N + S_E}{S + S_E}$$

n' Actual instrument security factor
n Rated instrument security factor
 Z_N Rated burden in VA
 S_E Internal power consumption of the transformer in VA (approx. 5 % to 20 % of Z_N)
S Actually connected burden in VA

Earthing of the secondary winding, for example, in a 4MA7 current transformer

Operation and earthing

The secondary circuits of current transformers must never be open during operation, as dangerously high voltages can occur, especially at high currents and cores with high ratings.

All metal parts of a transformer that are not live, but accessible, must be earthed. Therefore, the transformers have earth connection points identified with the earthing symbol. Also, one terminal of the secondary winding (for current transformers, normally k or 1s, etc.) must be earthed.

For earthing the secondary windings, a thread is provided under each secondary terminal. The earth connection required is made by fitting a special screw.

Capacitively coupled voltage detecting system

The guidelines for every medium-voltage switchgear of the new generation state that doors and covers can only be opened when there is no risk of electric shock. The movable single-pole voltage testers used up to now are not suitable for this. Therefore, every medium-voltage switchgear is offered with a system including a fixed-mounted capacitive voltage divider.

The capacitive voltage detecting system consists of a capacitive divider which divides the voltage U between the phase L and earth into the partial voltages U_1 and U_2 , and of an indicator applied to U_2 . The indicator contains a glow lamp that flashes when voltage is applied.

Indication range:

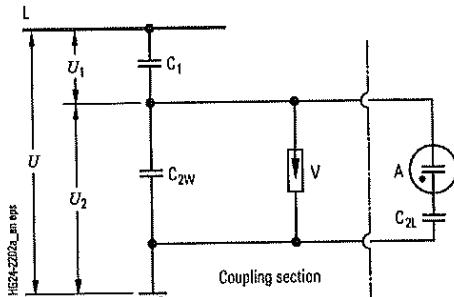

At $0.01 \times U_N$, no indication,
as of $0.40 \times U_N$, secure indication.

On request, support-type current transformers type 4MA7 can be delivered with capacitive layers for the voltage detecting system – then they contain a coupling electrode. This electrode is cast in a firm and protected way, and lead out at the secondary terminals with the designation CK. These current transformers are routine-tested additionally for compliance with the requested capacitance values (C_1 and C_{2W}). These values are documented on an additional label.

To ensure protection against electric shock even in the most improbable case that the current transformer punctures with the high-voltage capacitor (while an operator is touching the test sockets), a surge arrester is connected in parallel to this arrangement inside the transformer. If the high voltage is exceeded, it responds within nanoseconds, limiting the voltage at the test socket to harmless values.

Important for the ordering selection

When ordering transformers with capacitive layers
it is necessary to state the actual operating voltage U_N
(rated voltage), e.g. $U_m = 24 \text{ kV}$, $U_N = 15 \text{ kV}$.

Voltage detecting system

- A Indicator
- C_1 High-voltage capacitance (transformer)
- C_{2W} Low-voltage capacitance (transformer)
- C_{2L} Low-voltage capacitance (lead)
- L High-voltage phase
- U Voltage between phase and earth
- U_1 Partial voltage at C_1
- U_2 Partial voltage at C_2 and A
- V Surge arrester

1

Voltage transformers

Voltage transformers have only one magnet core, and are normally designed with one single secondary winding. If necessary, earthed (single-phase) voltage transformers are equipped with an additional residual voltage winding (earth-fault winding) beside the secondary winding (measuring winding).

In contrast to current transformers, voltage transformers must never be short-circuited on the secondary side. The earth-side terminal of the primary winding is effectively earthed in the terminal box, and must not be removed during operation.

Glossary of terms

Highest voltage for equipment U_m

The highest r.m.s. phase-to-phase voltage (in kV) for which a transformer is designed in respect of its insulation.

Rated voltage U_N

The voltage values (primary U_{PN} or secondary U_{SN}) stated on the rating plate of a transformer. If the voltage transformers are connected between phase and earth in three-phase systems, this phase-to-neutral voltage is considered the rated voltage. Except for the residual voltage winding, it is expressed as $U/\sqrt{3}$, with U being the phase-to-phase voltage.

U_m kV	Rated primary voltage kV	Rated secondary voltage V
up to 52	3.3 3.6 4.8 5 6 6.6 7.2 10 11 13.8 15 17.5 20 22 30 33 35 40 45	100 110 120
	or the values divided by $\sqrt{3}$	or the values divided by $\sqrt{3}$

Rated transformation ratio K_N

The ratio of the rated primary voltage to the rated secondary voltage. It is expressed as unreduced fraction, e.g.

$10000/\sqrt{3}$ V / $100/\sqrt{3}$ V (single-phase)

10000 V / 100 V (double-phase).

Voltage error F_U

The voltage error expressed in percent is defined by the formula:

$$F_U = 100 \cdot \frac{K_N \cdot U_{sec} - U_{prim}}{U_{prim}}$$

U_{prim} Actual primary voltage

U_{sec} Actual secondary voltage under measuring conditions when U_{prim} is applied

Phase displacement

The difference in phase between the primary voltage and the secondary voltage vectors, the direction of the vectors being so chosen that the angle is zero for a perfect transformer. The phase displacement is said to be positive when the secondary voltage vector leads the primary voltage vector. It is usually expressed in minutes.

Limits for voltage error and phase displacement according to IEC 60044-1

The voltage error and phase displacement at rated frequency shall not exceed the values given in the table at any voltage between 80 % and 120 % of rated voltage and with burdens of between 25 % and 100 % of rated burden at a power factor of 0.8 lagging.

Accuracy class	\pm voltage error %	\pm phase displacement Minutes
0.2	0.2	10
0.5	0.5	20
1	1	40

Rated output S_N

The value of the apparent power (in VA at a specified power factor) which the transformer is intended to supply to the secondary circuit at the rated secondary voltage and with rated burden connected to it.

Preferred values:

Accuracy class	Rated output						
	VA						
0.2	10	15	30	50	-	-	-
0.5	10	15	30	50	75	100	-
1	-	-	30	50	75	100	200

Thermal limiting output S_{th}

The value of the apparent power referred to rated voltage which can be taken from a secondary winding, at rated primary voltage applied, without exceeding the limits of temperature rise.

Thermal limiting output of the residual voltage winding

As the residual voltage winding is connected in broken delta, it is only stressed in case of fault. Therefore, the thermal limiting output of the residual voltage winding is referred to a stress duration of e.g. 8 h, and is expressed in VA.

Rated voltage factor

The multiplying factor to be applied to the rated primary voltage to determine the maximum voltage at which a transformer must comply with the relevant thermal requirements for a specified time and with the relevant accuracy requirements.

Multi-ratio

Voltage transformers for different rated primary voltages can only be reconnected on the secondary side for reasons of insulation.

Operation and earthing

In contrast to current transformers, voltage transformers must never be short-circuited on the secondary side. The earth-side primary terminal of earthed voltage transformers is insulated for a test voltage of 2 kV. It is connected to the earthed base plate in the terminal box.

Attention

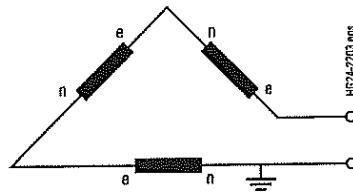

This connection must not be opened during operation.

Residual voltage windings connected in broken delta may only be earthed together at one point.

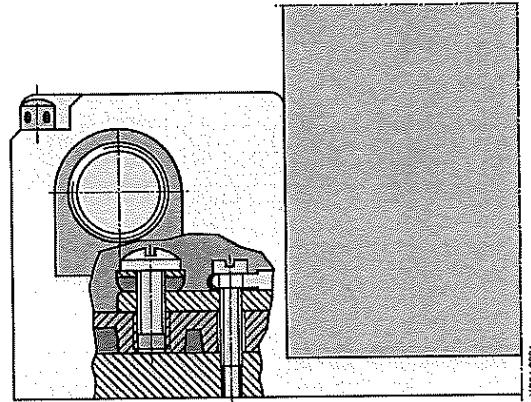

For earthing the secondary windings, a thread is provided under each secondary terminal. The earth connection required is established by fitting a special screw.

Relaxation oscillations

When single-phase voltage transformers are used in isolated systems, damping of the e-n windings connected in broken delta is recommended in order to avoid the possible destruction of the voltage transformers by relaxation oscillations.

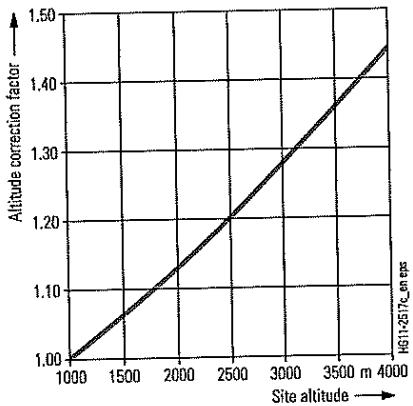

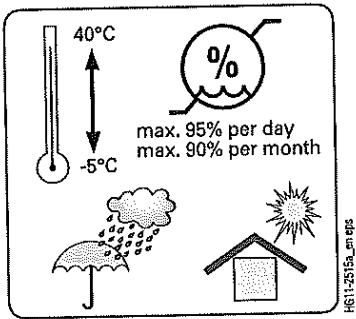

Connection and earthing of the e-n or da-dn winding

Earthing of the secondary winding, for example, in a 4MR voltage transformer

Description

Ambient conditions and dielectric strength

**Ambient conditions**

The transformers are designed for the normal operating conditions defined in the standards.

The conditions shown opposite apply to indoor transformers. All indoor transformers are suitable for use with high air humidity and occasional condensation (e.g. in tropical areas). As for outdoor transformers, the following conditions apply:

Minimum temperature

Outdoor transformers class 25 -25 °C

Outdoor transformers class 40 -40 °C

Relative air humidity

Outdoor transformers up to 100 %

Dielectric strength

The dielectric strength of air insulation decreases with increasing altitude due to low air density. According to IEC 62271-1, the values of the rated lightning impulse withstand voltage and the rated short-duration power-frequency withstand voltage specified, among others, in the chapter "Technical Data" apply to a site altitude of 1000 m above sea level. For an altitude above 1000 m, the insulation level must be corrected according to the opposite diagram.

The characteristic shown applies to both rated withstand voltages.

To select the devices, the following applies:

$$U \geq U_0 \times K_a$$

U Rated withstand voltage under reference atmosphere

U_0 Rated withstand voltage requested for the place of installation

K_a Altitude correction factor according to the opposite diagram

Example

For a requested rated lightning impulse withstand voltage of 75 kV at an altitude of 2500 m, an insulation level of 90 kV under reference atmosphere is required as a minimum:

$$90 \text{ kV} \geq 75 \text{ kV} \times 1.2$$

Test voltages and insulation level for instrument transformers

Proper operation of the transformers is proved by the following tests:

- Impulse test (type test)
- Separate source withstand voltage test (routine test)
- Induced voltage withstand test (routine test)
- Partial discharge measurement (routine test)

All transformers correspond to insulation class E, i.e. the maximum temperature rise is 120 °C.

Highest voltage for equipment U_m kV	Rated short-duration power-frequency withstand voltage kV	Rated lightning impulse withstand voltage V
7.2	20	60
12	28	75
17.5	38	95
24	50	125
36	70	170
52	95	250

Partial discharge measurement

Apart from the tests mentioned on page 14, partial discharge measurements are required for current and voltage transformers to test the insulation. A partial discharge is to be understood as any small, brief electrical discharge appearing on or in a test object when voltage is applied. The discharges appear as soon as the partial discharge inception voltage of the insulating medium is exceeded at any point.

Relatively high field strengths appear at sharp edges and peaks of metal parts, or also on bubbles and gas inclusions in solid or liquid insulating materials.

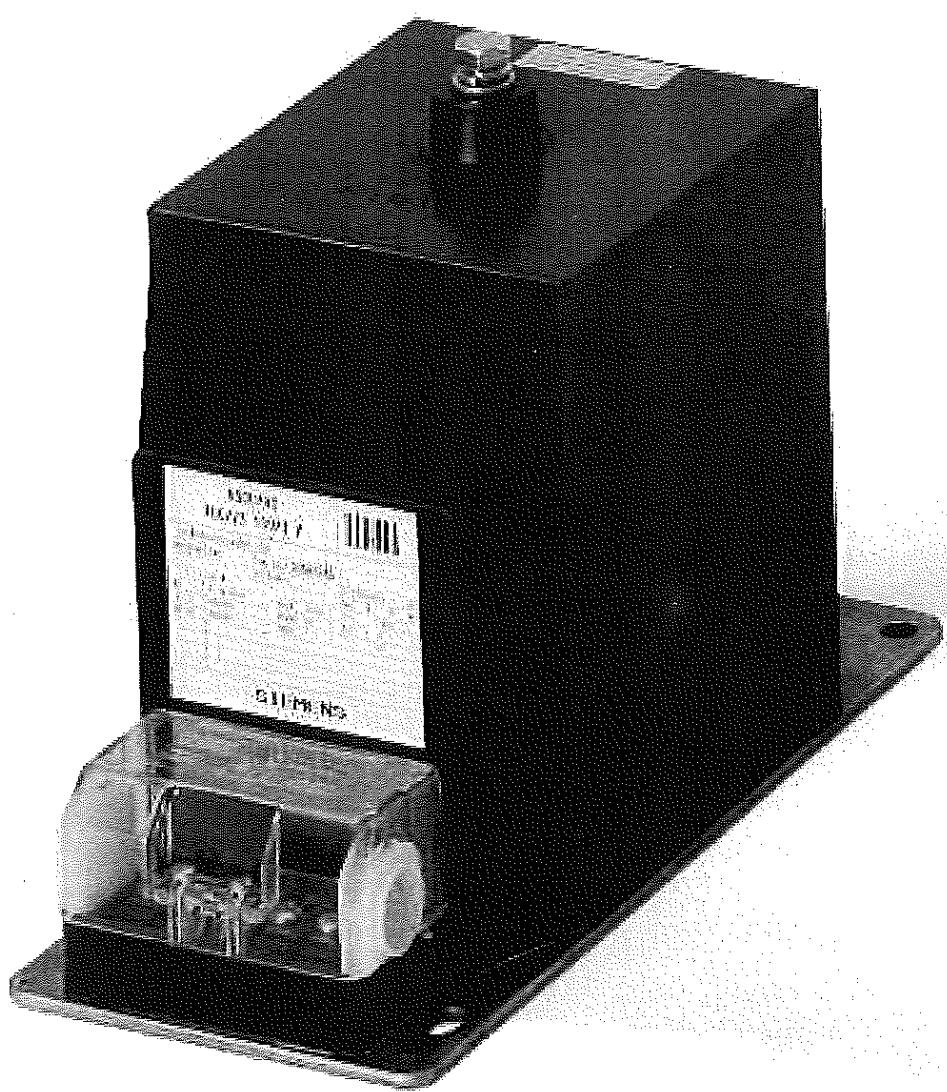

Partial discharges act like HF emitters, producing a mixture of the most different frequencies. The partial discharge measurement enables an assessment about the homogeneity of the insulating material. Partial discharge measurements are performed as a routine test on inductive transformers with solid insulation as of $U_m = 3.6$ kV.

Type of earthing	Type of transformer	Pre-stressing voltage $\geq 10s$	Measuring voltage $\geq 1\text{ min}$	Permissible partial discharge level Apparent load
Systems with isolated or impedance earthed neutral	Current transformers and earthed voltage transformers	$1.3 U_m$	$1.1 U_m$ $1.1 \frac{U_m}{\sqrt{3}}$	250 pC 50 pC
	Unearthed voltage transformers	$1.3 U_m$	$1.1 U_m$	50 pC
Systems with solidly earthed neutral	Current transformers and earthed voltage transformers	$0.8 \times 1.3 U_m$	$1.1 \frac{U_m}{\sqrt{3}}$	50 pC
	Unearthed voltage transformers	$1.3 U_m$	$1.1 U_m$	50 pC

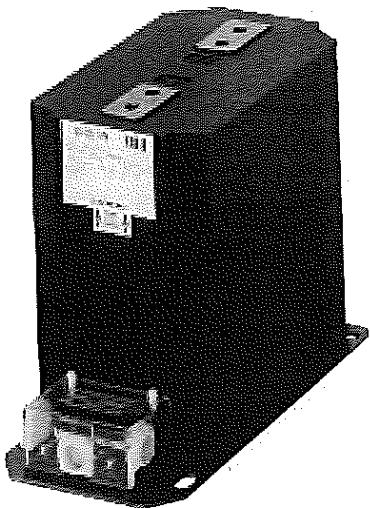

Standards

Protective and measuring transformers conform to the following standards:

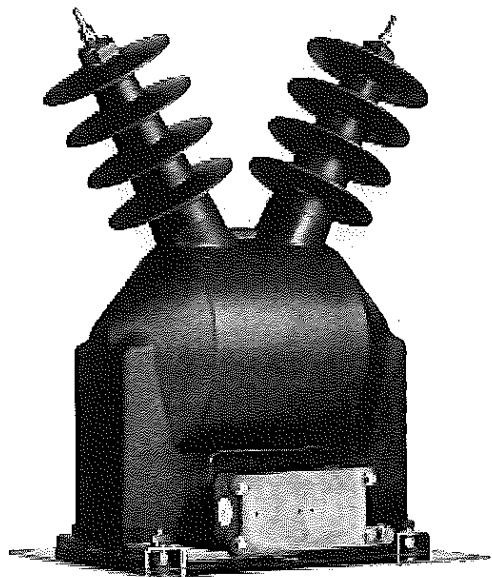

- VDE 0414 "Stipulations for instrument transformers"
- VDE 0111 "Insulation co-ordination for equipment in three-phase systems above 1 kV"
- IEC 60044-1
- IEC 60044-2
- ANSI 1675 (IEEE)
- DIN 42600

Order number structure

Protective and measuring transformers are described by a 12 or 16-digit order number. The first five characters describe the type, design and application of the transformer (primary part), and the positions 6 to 12 or 6 to 16 identify the core data of the transformer.

The transformers offered in the selection are only a part of the possible variations. If the transformer required is not shown, please clarify the feasibility with the responsible sales partner or the order processing department at the Switchgear Factory Berlin. The same applies to transformers according to the ANSI standard.

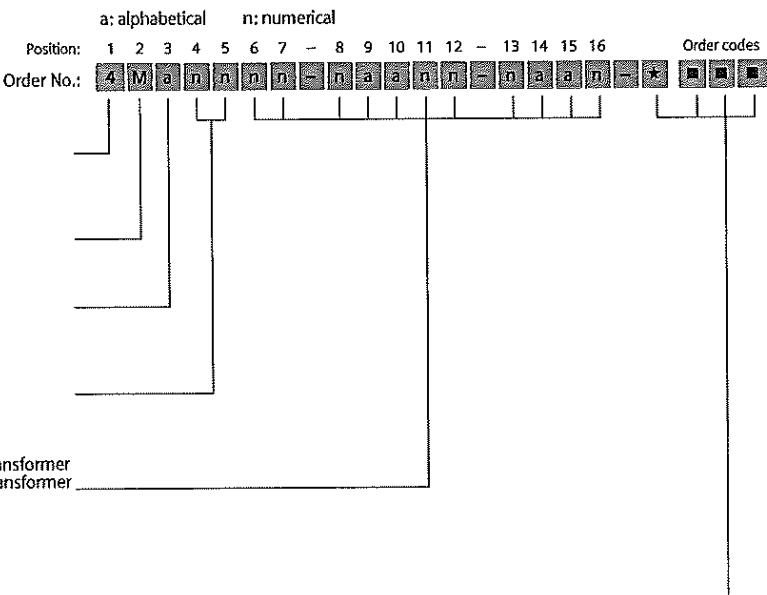

Order codes

Individual equipment versions, marked with 9 or Z in the 9th to 16th position, are explained more in detail by a 3-digit order code. Several order codes can be added to the order number in succession and in any sequence.

Built-on components and special versions (★)

For built-on components and special versions, "-Z" is added to the order number and a descriptive order code follows. If several built-on components and special versions are required, the suffix "-Z" is listed only once. If a requested special version is not in the catalog and can therefore not be ordered via order code, it has to be identified with Y 9 9 after consultation. The agreement hereto is made directly between your responsible sales partner and the order processing department in the Switchgear Factory Berlin.

1 st position	Primary part Superior group Transformers

6 th to 16 th position 6 th to 12 th position	Core data Design and data of the current transformer Design and data of the voltage transformer Special versions (★) Initiated with "-Z" Group of 3 after the Order No. Format: a n n

Configuration example

At the end of each of the following pages with selection data you will find a configuration example to make the order number structure more clear. Starting from the last selection of the basic type, this example is continued, so that at the end of the equipment selection a completely configured and orderable transformer results for every product group.

On the foldout page we offer a configuring aid. Here you can fill in the order number you have determined for your transformer.

Example for Order No.:

Equipment Selection

4MA7 indoor support-type current transformer, block-type design

4M Protective and Measuring Transformers

12.5 kA

10th to 14th position

Core versions

At rated primary current I_{PN}

The diagram illustrates the mapping of Order positions (1-16) onto Order codes (A-F) and their corresponding Thermal strength values. The Order codes A, B, C, D, E, and F are mapped to positions 1 through 16 respectively. Order code G is mapped to positions 17 through 20. Order code H is mapped to positions 21 through 24. Order code I is mapped to positions 25 through 28.

With routine test certificate
in German/English
Configuration example

Voltage transformer

Outdoor design, single-phase, cast-resin insulated

Rated primary voltage with multi-ratio $U_{\text{prim}} = 35\sqrt{3}$ kV

Without auxiliary residual voltage winding

Rated secondary voltage $U_{\text{sec}} = 110$ V

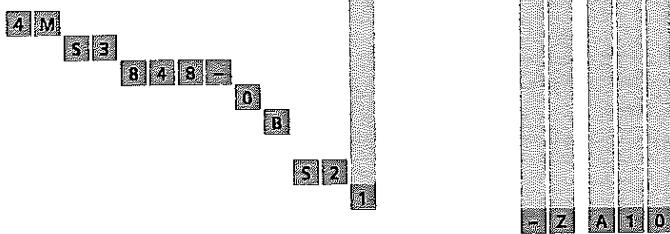

Rated output of measuring winding 180 VA

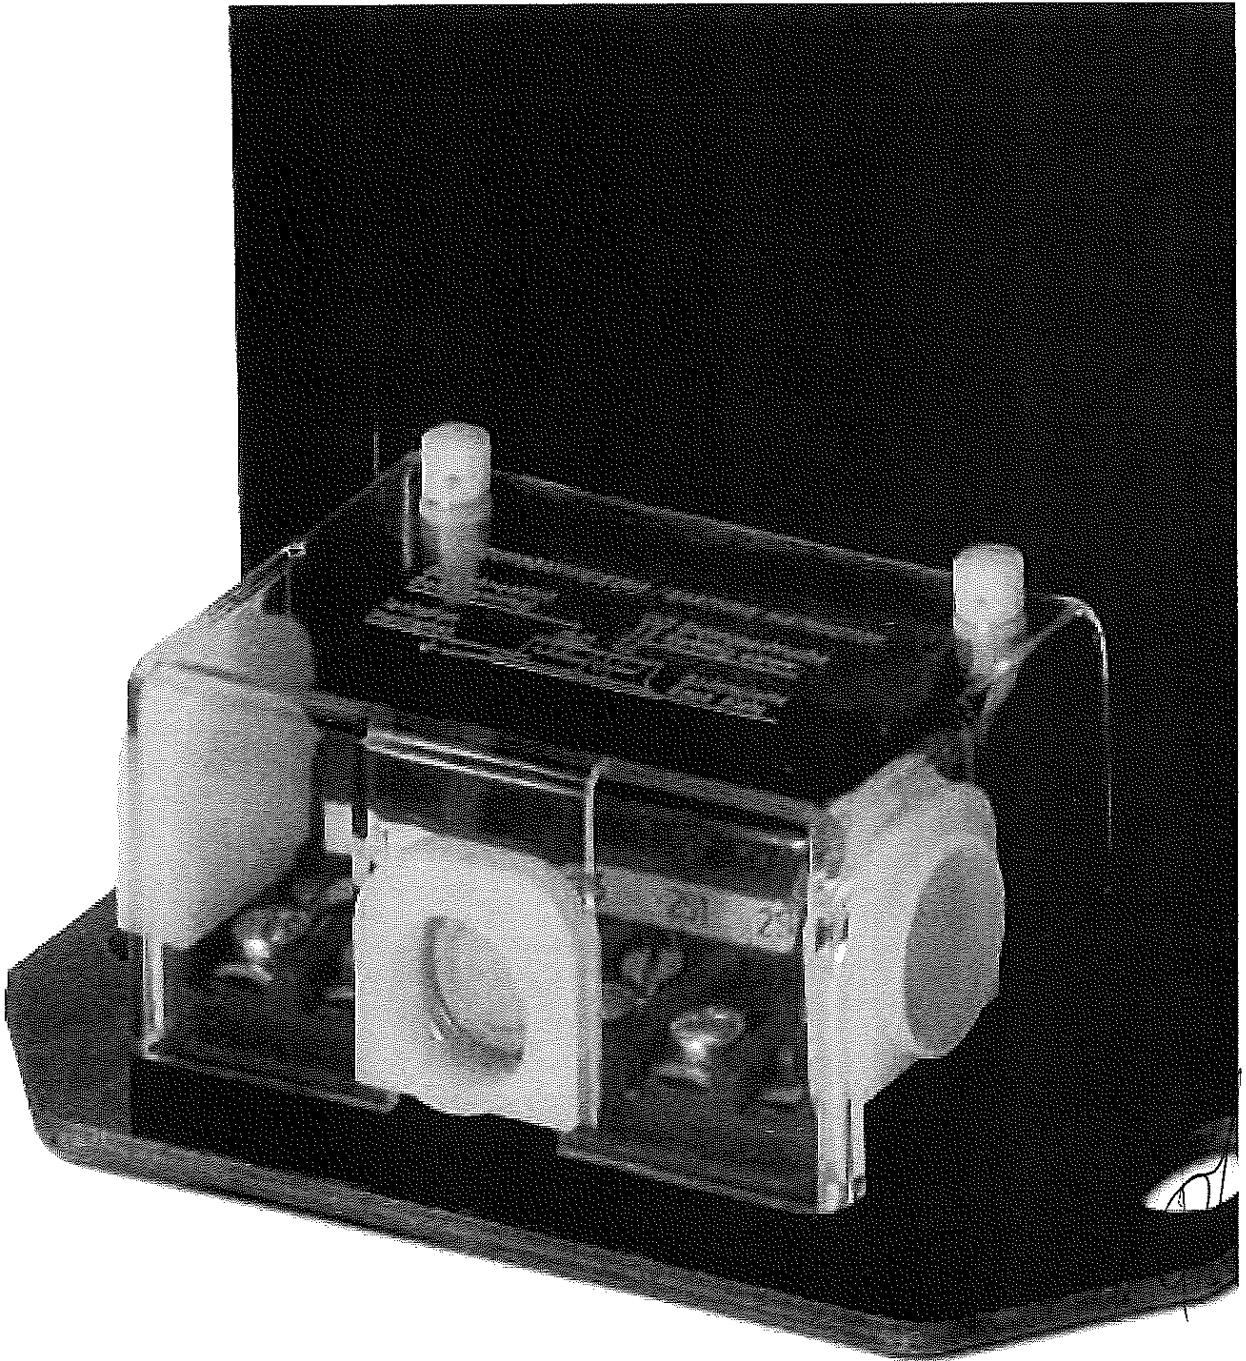

Accuracy class 0.5

Additional features 50 Hz, IEC marking

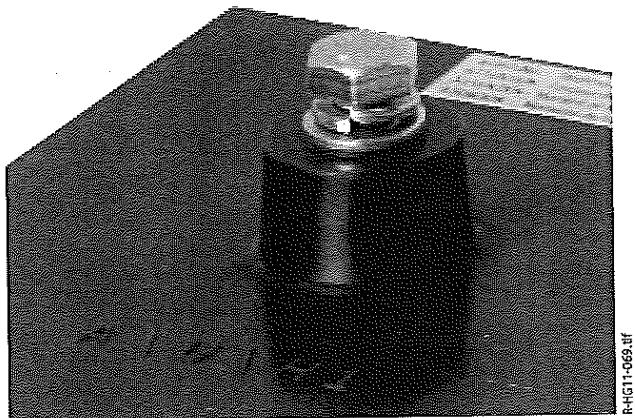

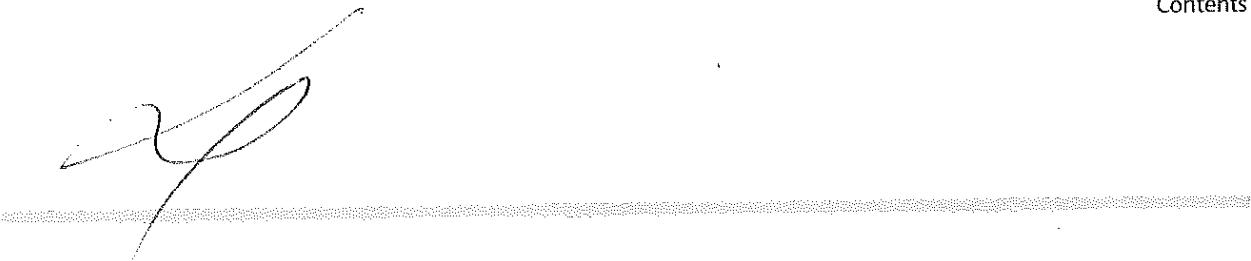

With routine test certificate in German/English

Example for Order No.: 4 M S 3 8 4 8 0 B S 2 1

___ Please fill in

You prefer to configure your instrument transformer on your own?
Please follow the steps for configuration and enter the order number in the configuration aid.

For configuration of your
4M protective and measuring transformers

Instruction for configuration of the 4M protective and measuring transformers

1 2 3 4 5 6 7 - 8 9 10 11 12 - 13 14 15 16

1st step: Definition of the current transformer

Please specify the following ratings:	Possible options:
Transformer design	Block-type transformer, bushing-type transformer, outdoor transformer, etc.
Operating voltage (U_m)	U_m : 12 kV to 52 kV
Rated lightning impulse withstand voltage (U_d)	U_d : 75 kV to 250 kV
Rated short-duration power-frequency withstand voltage (U_s)	U_s : 28 kV to 95 kV
Rated primary current (I_{pn})	I_{pn} : 20 A to 10000 A
Secondary current (I_{sn})	I_{sn} : 1 A or 5 A
Thermal strength	100 $\times I_{pn}$ to 1000 I_{pn}
Core data	Quantity, type, class, factor and rating of cores

These ratings define the positions 3 to 15 of the order number of the current transformer.

4 M	-	-
	+	+
	+	+
	+	+
	+	+

2nd step: Definition of the voltage transformer

Please specify the following ratings:	Possible options:
Transformer design	Block-type transformer, outdoor transformer
Number of phases	Single-phase or double-phase
Operating voltage (U_m)	U_m : 12 kV to 52 kV
Rated lightning impulse withstand voltage (U_d)	U_d : 75 kV to 250 kV
Rated short-duration power-frequency withstand voltage (U_s)	U_s : 28 kV to 95 kV
Rated primary voltage (U_{pn})	U_{pn} : 3.3 kV to 45 kV or values divided by $\sqrt{3}$
Rated secondary voltage (U_{sn})	U_{sn} : 100 V, 110 V, 120 V or values divided by $\sqrt{3}$
Rated output of the measuring winding	25 VA, class 0.2 up to 400 VA, class 1

These ratings define the positions 3 to 11 of the order number of the voltage transformer.

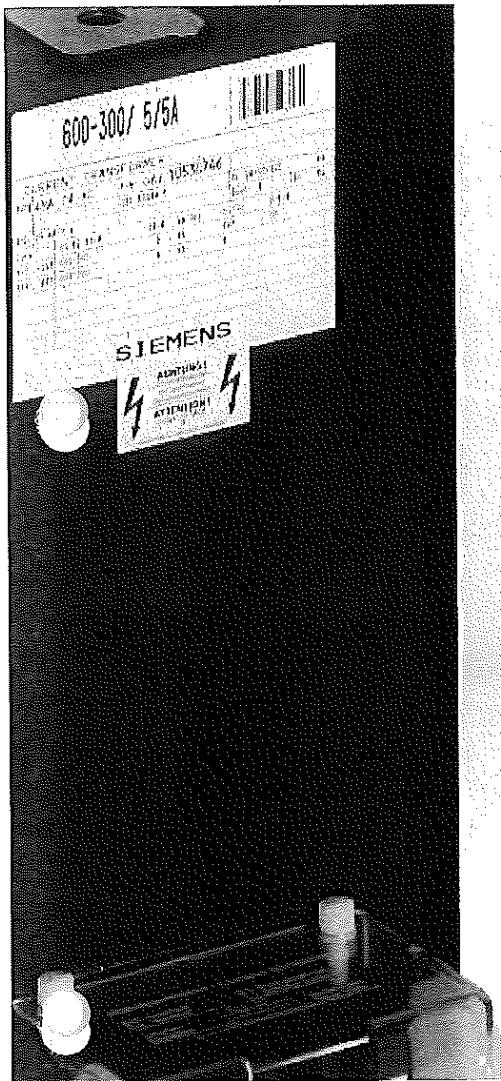

4 M	-	-
	+	+
	+	+
	+	+
	+	+

3rd step: Do you have any further requirements concerning the equipment?

Should you still need more options than the possible equipment like terminal designations according to VDE or IEC, selection of sizes, routine test certificate, etc., please contact your responsible sales partner.

4 M	-	-

**Описание на допълнение № 17.01.5109.1 към удостоверение за одобрен тип
№ 16.11.5109:**

Към т.2 Технически и метрологични характеристики се добавя към **Мощност, VA/клас на точност:** от 5 до 15/0,2S; 0,2

Таблицата от т.2 Технически и метрологични характеристики добива вида:

Характеристика	Трансформатор тип 4MAxx		
	4MA72	4MA74	4MA76
Максимално работно напрежение, кV	до 12	до 24	до 36
Номинален първичен ток, А	до 4000		
Номинален вторичен ток, А	1 и 5		
Честота, Hz	50		
Клас на точност			
- измервателна намотка	0,2S; 0,2; 0,5S; 0,5; 1		
- защитна намотка	5P10; 10P10		
Мощност, VA/клас на точност	от 5 до 15/0,2S; 0,2 от 5 до 30/0,5S; 0,5; 1 от 5 до 30/5P10; 10P10

3. Identity of the test object

3.1 Technical data and characteristics

The technical data and characteristics of the test object are defined by the following parameters and specified by the client

Test object: Block-type current transformer
 Type: 4MA74
 Manufacturer: ALCE Elektrik Sanayi ve Ticaret A.Ş.
 Serial No.: 03/00811
 Year of manufacture: 2003

Data:	Rated primary current (I_n)	1250 A
	Rated continuous thermal current (I_{cont})	$1.2 \times I_n$
	Rated secondary current core 1	5 A
	core 2	5 A
	Rated frequency	50 - 60 Hz
	Rated output core 1	15 VA
	core 2	15 VA
	Accuracy class core 1	0.5FS5
	core 2	5P10
	Rated dynamic current (I_{dyn})	80 kA
	Rated short-time thermal current (I_{th})	31.5 kA
	Duration of short-circuit	3 s
	Rated insulation level	
	Highest voltage for equipment (U_m)	24 kV
	Rated power-frequency withstand voltage	50 kV
	Rated lightning impulse withstand voltage (list 2)	125 kV
	Insulating material class	E
Characteristics:	Winding material Primary winding	Cu
	Secondary winding, core 1	Cu
	Secondary winding, core 2	Cu
	Cross-section of windings Primary winding	690 mm ²
	Secondary winding, core 1	2.55 mm ²
	Secondary winding, core 2	2.54 mm ²

3.2 Identity documents

The manufacturer confirms that the test object has been manufactured in compliance with the drawings given in this document. IPH did not verify this compliance in detail.
 The identity of the test object is fixed by the following drawings and data submitted by the client:

Name of drawing	Drawing No.	Date of drawing	Author	Notes
4MA74 BLOCK-TYPE CURRENT TRANSFORMER	416	06.02.03	ALCE	Sheet 30

Entry of test object at IPH: 13 February 2003

5. Determination of errors

5.1 Test laboratory

Low-voltage test laboratory, test room 3

5.2 Normative document

IEC 60044-1: 1996-12, mod. + am1: 2000-07, Sub-clauses 11.4 and 12.4

5.3 Required test parameters

Protective current transformer: The current errors shall be determined at 100 % of rated current and 100 % of rated burden.

Measuring current transformer: The current errors shall be determined at 5 %, 20 %, 100 % and 120 % of rated current and 25 % and 100 % of rated burden.

For a burden less than 5 VA a power factor of $\cos \beta = 1$ shall be used, otherwise a power factor of $\cos \beta = 0.8$ shall be applied.

The test frequency shall equal the rated frequency and be 50 Hz

Maximum permissible error limits of current transformers for measuring and protecting purposes:

Accuracy class	Current error at percentage of rated current				Phase displacement at percentage of rated current			
	%				Minutes			
	5	20	100	120	5	20	100	120
0.5	1.5	0.75	0.5	0.5	90	45	30	30
5P	1				60			

5.4 Test arrangement

To IEC 60044-1: 1996, mod. + am1: 2000, Sub-clauses 11.4 and 12.4

After it had been demagnetised, the test object was connected via a matching transformer to an instrument transformer measuring device including a measurement standard transformer. An oscillographic null detector was used for the visual check of the comparison. The test object was subjected to the prescribed test conditions by connection of a standard burden.

6.1.4 Test arrangement

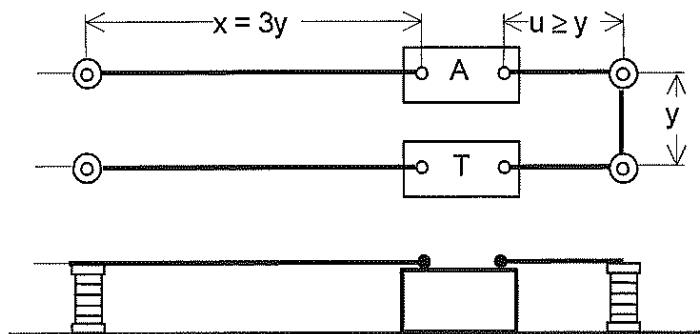

The test was carried out single-phase in accordance with the STL guide to the interpretation of IEC 60044-1. A second current transformer of the same type was set up in the return conductor. The pole centres distance was to the manufacturer's instructions.

The distance x was 690 mm, the distances u and y were 230 mm.

The test object was connected by copper bars of 80 mm x 10 mm.

The secondary windings were short-circuited by flexible copper conductors of 10-mm² cross-section.

See Figures 9 and 10, Sheet 24.

6.5	5-A winding 2	Cu wire	75	83.4	66.7
6.6	Ambient air	Air	-	16.7	-

Determination of the current transformer's winding temperature rise.

The current transformer was tested at rated burden. The temperature rise θ of the current transformer winding was determined on the basis of the rise of winding resistance from the cold state to the steady state of temperature rise of the complete assembly using the following formula given by DIN VDE 0532 Teil 2, Sub-clause 3.3 (transformers and reactors).

$$\theta_w = \frac{R_w}{R_k} (235 + \theta_k) - 235$$

Where: R_k Cold resistance of the winding at 18.5 °C

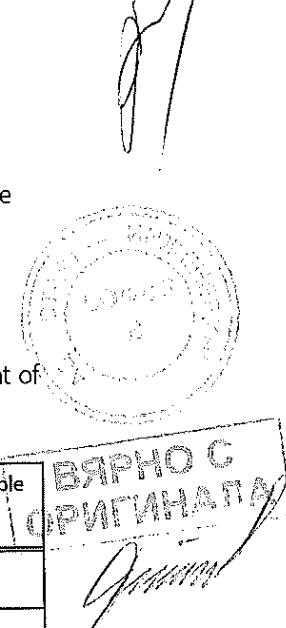

R_w Warm resistance of the winding at 16.7 °C of ambient air temperature

θ_k Cold temperature of winding

θ_w Final temperature of the winding

The hot resistance of the secondary winding was calculated on the basis of the measurement of the cooling curve.

	R_k mΩ	R_w mΩ	R_w/R_k	θ_w °C	θ K	Permissible K

8. Evaluation of all tests**• Lightning impulse test**

During the test at 125-kV lightning impulse voltage, no disruptive discharge occurred. The recorded voltage curve did not present any significant variation between recordings at reference impulse and at full impulse level.

The routine tests have successfully been repeated.

The requirements specified by IEC 60044-1: 1996, Sub-clause 7.3.2 have been met

The current transformer has PASSED the type test – impulse voltage test.

• Determination of errors

The measured current error and phase displacement values are within the limits permissible for accuracy class 0.5 for measuring current transformers and class 5P for protective current transformers.

The requirements specified by IEC 60044-1: 1996, Sub-clauses 11.4 and 12.4 have been met.

The current transformer has PASSED the type test – determination of errors.

• Short-time current test

The current transformer is capable of properly carrying its rated dynamic current of 80 kA and its rated short-time thermal current of 31.5 kA for a duration of short-circuit of 3 s.

- After test, the current transformer was not visibly damaged.
- The errors determined after test did not differ from those recorded before test by more than half the limits of error appropriate to its accuracy class.
- During the dielectric tests done after the short-time current test, no disruptive discharge occurred. The partial discharge magnitude was below the permissible limit of 50 pC at $1.2 \times U_m$.
- The visual inspection of the insulation of the primary winding was not necessary as the current density in the primary winding, related to the rated short-time thermal current, does not exceed 180 A/mm².

The requirements specified by IEC 60044-1: 1996-12, Sub-clause 7.1 have been met

The current transformer has PASSED the type test – short-time current test

• Temperature-rise test

Subjected to its rated primary continuous thermal current of 1500 A, the test object reaches a maximum final temperature rise of 67.4 K in the secondary windings. The final winding temperature-rise limit of 75 K permissible for the class of insulation "E" was not exceeded.

The requirements specified by IEC 60044-1: 1996, Sub-clause 7.2 have been met

The current transformer has PASSED the type test – temperature-rise test.
